Al-Thani, 2010-06-04 Project finance has spread worldwide and includes numerous industrial projects from power stations and waste disposal plants to telecommunication facilities bridges tunnels railway networks and now also the building of hospitals education facilities government accommodation and tourist facilities Despite financial assessment of PF projects being fundamental to the lender's decision there is little understanding of how the use of finance is perceived by individual stakeholders why and how a financial assessment is performed who should be involved where and when it should be performed what data should be used and how financial assessments should be presented Current uncertainty in financial markets makes many sponsors of construction project financings carefully consider bank liquidity the higher cost of finance and general uncertainty for demand This has resulted in the postponement of a number of projects in certain industry sectors Governments have seen tax receipts drastically reduced which has affected their ability to finance infrastructure projects often irrespective of the perceived demand Equity providers still seek to invest however there are less opportunities due to market dislocation Due to the demand for global infrastructure it is believed that project financings will return to their pre crunch levels or more so however lenders liquidity costs will be passed on to the borrowers Lenders will also be under stricter regulation both internally and externally The steps outlined in the guide are designed to provide a basic understanding for all those involved or interested in both structuring and assessing project financings Secondary contracts involving constructors operators finance providers suppliers and offtakers can be developed and assessed to determine their commercial viability over a project's life cycle Special Features a structured guide to assessing the commercial viability of construction projects explains economic metrics to use in the decision making process detailed case study shows how stakeholders apply the concept of project finance **Risk Pricing Strategies for Public-Private Partnership Projects** Abdelhalim Boussabaine, 2013-12-16 Risk Pricing Strategies for Public Private Partnership Projects Innovation in the Built Environment The complexity of public private partnership PPP project procurement requires an effective process for pricing managing and appropriate allocation of risks The level at which risk is priced and the magnitude of risks transferred to the private sector will have a significant impact on the cost of the PPP deals as well as on the value for money analysis and on the selection of the optimum investment options The construction industry tends to concentrate on the effectiveness of risk management strategies and to some extent ignores the price of risk and its

impact on whole life cost of building assets There is a pressing need for a universal framework for the determination of fair value of risks throughout the PPP procurement processes Risk Pricing Strategies for Public Private Partnership Projects addresses the issues of risk pricing and demonstrates the use of a coherent strategy to arrive at a fair risk price The focus of the book is on providing risk pricing strategies to maximise return on risk retention and allocation in the procurement of PPP projects With its up to date coverage of the latest developments in risk pricing and comprehensive treatment of the methodologies involved in designing and building risk pricing strategies the book offers a simple model for pricing risks The book follows a thematic structure PPP processes map risk uncertainty and bias risk pricing management strategies risk pricing measurement and modelling risk pricing at each of the project life cycle stages and deals with all the important risk pricing issues using relevant real world situations through case study examples It explains how the theory and strategies of risk pricing can be successfully applied to real PPP projects and reflects the broad understanding required by today's project risk analysts in their new and important role in PPP contract management Also in the IBE series Managing Change in Construction Projects Senaratne Sexton 978 14443 3515 6 Innovation in Small Professional Practices in the Built Environment Lu Sexton 978 14051 9140 1 Other books of interest Urban Infrastructure Finance and Management Wellman Spiller 978 0 470 65635 8 Project Finance for Construction and Infrastructure Pretorius Chung Hsu McInnes Lejot Arner Construction Supply Chain Management Pryke 978 14051 5844 2 Policy Finance Management for Public Private Partnerships Edited by Akintoye Beck 978 14051 7791 7 Strategic Issues in Public Private Partnerships 2nd Edition Dewulf Blanken Bult Spiering 978 0 470 65635 8 Independent Power Projects in Developing Countries Henrik M. Inadomi, 2010-01-01 For developing countries a stable and secure supply of electricity is crucial for development and for their populations well being Since the early 1990s the main mechanism for constructing power generation facilities in developing countries has been the independent power project IPP model where a foreign investor enters into long term investment contracts with the national utility This model has succeeded in attracting investment but raises complex regulatory and contractual challenges in addition to public concerns This book drawing on project contracts the author's interview sources case law and literature analyzes in detail the legal investment protection used by IPP investors to ensure sufficient returns and protect their contracted revenue stream The author examines how the model's corporate financial structure interlocks with strong contractual rights and with a number of measures used to improve the host country's creditworthiness in the short and long term including investment guarantees The second part of the book identifies that the IPP model normally leads to six main consequences for the host developing country The IPP model has led to private investment which has increases reliability modernization and introduced private standards It contains an intrinsic structural weakness in times of economic downturns It has shown a tendency to lead to overinvestment in generation capacity It has shown a tendency to lead to expensive and suboptimal solutions regarding choice of design and technology The model and its institutional surroundings contains

insufficient disincentives against moral hazard and exploitative behavior including corruption and The IPP model does not facilitate a further development of the host country's power sector The author argues that these consequences for development can be improved without detrimentally compromising the private sector's willingness to continue to invest While pursuing this analysis the author also explores such issues as the following the web of parties and contracts constituting the IPP model including the model's risk allocation an analysis of political risk including to what extent foreign investors also are protected against commercial and credit risks the competing needs of predictability and flexibility in long term contracts how investment arbitration tribunals have reacted both to the change in macroeconomic circumstances caused by the East Asian Crisis of 1997-98 and to numerable and credible allegations of corruption during procurement identification of factors reducing or increasing the IPP model's tendency to fail during severe economic recessions
