Jackson,2006-10-02 Laboratory animals including dogs play an important role in biomedical research and medical advances

Dogs have a long history of use in research and have contributed enormously to the health and welfare of both humans and animals. The humane care and management of these animals is a fundamental component of their use in medical research. The Laboratory Canine clearly presents basic background information covering subjects that apply specifically to dogs used in research settings such as basic biological features, husbandry, management, veterinary care, experimental methodology, and resources. The book offers guidance on performing a detailed physical examination including necessary veterinary supplies, clinical signs of illness, clinical conditions, and reference tables of widely used veterinary drugs. It discusses the human-animal bond or the relationship between people and animals and its significance and importance to the quality of research, the health of the animals, and the emotional health of staff caring for or working with animals. It also examines anesthetic and surgical procedures that include pre-intra and post-anesthesia operative monitoring. The Laboratory Canine contains reference charts for monitoring patients through post-operative recovery and reference tables for anesthetics and analgesics. Because dogs are a highly visible species in the eyes of the public and regulators, it is important that individuals working with laboratory canines have the proper training and experience. This valuable resource is ideal for those charged with the care and use of canines in a research setting. [Animal Science Reviews 2012](#) David Hemming, 2013-02-01. adoption of new knowledge information and technologies The agricultural sector worldwide faces numerous daunting challenges that will require innovations new technologies and new ways of approaching agriculture if the food feed and fiber needs of the global population are to be met The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century
