Banach Space Complexes C. -G. Ambrozie, Florian-Horia Vasilescu, 1995-08-31 **Banach Space Complexes** C.-G. Ambrozie, Florian-Horia Vasilescu, 2012-12-06 The aim of this work is to initiate a systematic study of those properties of Banach space complexes that are stable under certain perturbations A Banach space complex is essentially an object of the form $0 \rightarrow X_0 \rightarrow X_1 \rightarrow \dots \rightarrow X_p \rightarrow \dots \rightarrow X_{\infty}$ where p runs a finite or infinite interval of integers X_p are Banach spaces and $\partial_p X_p \rightarrow X_{p-1}$ are continuous linear operators such that $\partial_p \partial_{p+1} = 0$ for all indices p In particular every continuous linear operator $S: X \rightarrow Y$ where X, Y are Banach spaces may be regarded as a complex $0 \rightarrow X \xrightarrow{S} Y \rightarrow 0$ The already existing Fredholm theory for linear operators suggested the possibility to extend its concepts and methods to the study of Banach space complexes The basic stability properties valid for semi Fredholm operators have their counterparts in the more general context of Banach space complexes We have in mind especially the stability of the index i.e the extended Euler characteristic under small or compact perturbations but other related stability results can also be successfully extended Banach or Hilbert space complexes have penetrated the functional analysis from at least two apparently disjoint directions A first direction is related to the multivariable spectral theory in the sense of J. L. *Complex Analysis on Infinite Dimensional Spaces* Sean Dineen, 2012-12-06 Infinite dimensional holomorphy is the study of holomorphic or analytic functions over complex topological vector spaces The terms in this description are easily stated and explained and allow the subject to project itself initially and innocently as a compact theory with well defined boundaries However a comprehensive study would include delving into and interacting with not only the obvious topics of topology several complex variables theory and functional analysis but also differential geometry Jordan algebras Lie groups operator theory logic differential equations and fixed point theory This diversity leads to a dynamic synthesis of ideas and to an appreciation of a remarkable feature of mathematics its unity Unity requires synthesis while synthesis leads to unity It is necessary to stand back every so often to take an overall look at one's subject and ask How has it developed over the last ten twenty fifty years Where is it going What am I doing I was asking these questions during the spring of 1993 as I prepared a short course to be given at Universidade Federal do Rio de Janeiro during the following July The abundance of suitable material made the selection of topics difficult For some time I hesitated between two very different aspects of infinite dimensional holomorphy the geometric algebraic theory associated with bounded symmetric domains and Jordan triple systems and the topological theory which forms the subject of the present book **Complex Analysis in Banach Spaces** J. Mujica, 1985-11-01 Problems arising from the study of holomorphic continuation and holomorphic approximation have been central in the development of complex analysis in finitely many variables and constitute one of the most promising lines of research in infinite dimensional complex analysis This book presents a unified view of these topics in both finite and infinite dimensions **Complex Analysis and Dynamical Systems III** Mark L'vovich Agranovskiĭ, 2008 The papers in this volume cover a wide variety of topics in the geometric theory

of functions of one and several complex variables including univalent functions conformal and quasiconformal mappings minimal surfaces and dynamics in infinite dimensional spaces In addition there are several articles dealing with various aspects of approximation theory and partial differential equations Taken together the articles collected here provide the reader with a panorama of activity in complex analysis drawn by a number of leading figures in the field

Complex Analysis and Dynamical Systems V Mark L'vovich Agranovskii, Matania Ben-Artzi, Greg Galloway, Lavi Karp, Vladimir Maz'Ya, 2013-06-03 This volume contains the proceedings of the Fifth International Conference on Complex Analysis and Dynamical Systems held from May 22-27 2011 in Akko Acre Israel The papers cover a wide variety of topics in complex analysis and partial differential

Analysis and Quantum Groups Lars Tuset, 2022-07-27 This volume presents a completely self contained introduction to the elaborate theory of locally compact quantum groups bringing the reader to the frontiers of present day research The exposition includes a substantial amount of material on functional analysis and operator algebras subjects which in themselves have become increasingly important with the advent of quantum information theory In particular the rather unfamiliar modular theory of weights plays a crucial role in the theory due to the presence of Haar integrals on locally compact quantum groups and is thus treated quite extensively The topics covered are developed independently and each can serve either as a separate course in its own right or as part of a broader course on locally compact quantum groups The second part of the book covers crossed products of coactions their relation to subfactors and other types of natural products such as cocycle bicrossed products quantum doubles and doublecrossed products Induced corepresentations Galois objects and deformations of coactions by cocycles are also treated Each section is followed by a generous supply of exercises To complete the book an appendix is provided on topology measure theory and complex function theory

Finite or Infinite Dimensional Complex Analysis Joji Kajiwara, 2019-05-07 This volume presents the proceedings of the Seventh International Colloquium on Finite or Infinite Dimensional Complex Analysis held in Fukuoka Japan The contributions offer multiple perspectives and numerous research examples on complex variables Clifford algebra variables hyperfunctions and numerical analysis

Several Complex Variables IV Semen G. Gindikin, Gennadij M. Khenkin, 2012-12-06 This volume of the EMS contains four survey articles on analytic spaces They are excellent introductions to each respective area Starting from basic principles in several complex variables each article stretches out to current trends in research Graduate students and researchers will find a useful addition in the extensive bibliography at the end of each article
