Angiology In Practice Developments In Cardiovascular Medicine:

Angiology in Practice A-M. Salmasi, A. Strano, 2012-12-06 Arterial and venous diseases are major causes of morbidity and mortality in most of the world especially in the western hemisphere Not only of interest to angiologists these illnesses are also of concern to most physicians in various fields ranging from cardiology general medicine and cardiovascular surgery to physiology pathology and clinical pharmacology Specialists in diabetes hypertension and epidemiology find these illnesses as challenging in their own fields of interest due to the gross interrelation of these diseases with their specialities This book of 35 chapters contains an up to date discussion of various arterial and venous illnesses presenting major clinical applications ranging from basic pathology haemodynamics and haemorheology to clinical features and management Special attention has also been paid to epidemiology and prevention discussing all the issues concerned A special section on vascular emergency has also been included thereby extending its usefulness to physicians and surgeons working in accident and emergency units

Surgical Options for the Treatment of Heart Failure R. Masters, 2007-12-14 Despite the

significant decline in heart disease mortality rates over the last 25 years heart failure has remained a significant problem We are now confronted with large numbers of terminally ill patients for whom conventional therapies for heart failure have been exhausted and for whom repeated hospital visits are necessary There now is a major thrust towards a management strategy which embraces a comprehensive approach including vigorous preventive measures and earlier surgical interventions This book outlines the major surgical options for the treatment of heart failure and brings together a very broad base of opinions with contributions from several outstanding individuals With the improved knowledge and techniques to control rejection transplantation has become the central pillar in the surgical management of this group of patients Unfortunately because of limited donor supply the technique cannot be applied to large numbers of patients A great deal of excitement however exists in the potential for xenotransplantation as a supplement to homotransplantation The use of cardiac assist devices has become a reality with several hundred LVADS and BiVADS implanted throughout the world and cardiac replacement with total artificial hearts continues to be used successfully as a bridge to transplantation We are on the threshold of the broad application of assist devices to provide prolonged relief of heart failure and restore patients to an ambulatory home environment and hopefully return to the work force in significant numbers

Cardiovascular Genetics for Clinicians

P.A.F.M. Doevendans, A.A.M. de Wilde, 2001-10-31 All physicians practicing medicine encounter patients suffering from cardiovascular disease This book has been outlined in such a way that vascular surgeons general internists neurologists and cardiologists should be able to use it The book covers the complete scope of cardiac diseases in addition to chapters on hypertension and atherosclerosis In many patients there is a family history of cerebrovascular accidents myocardial infarction or peripheral arterial disease Also in patients reporting collapse palpitations and arrhythmias the family is crucial and can provide clues to a genetic cause of the disease This book is published to guide physicians in the process of determining whether a genetic component is likely to be present Furthermore information is provided what the possibilities and limitations of DNA diagnostic techniques are Finally the importance of newly identified categories of potential patients i.e. gene carriers without symptoms or any inducible sign of disease is highlighted For some patients a genetic diagnosis is essential to determine appropriate therapy and for counseling In some other diseases DNA diagnostic tools are available but the relevant for the patients may be less clear In other families the search for a disease causing gene is ongoing and the possibilities to find genes and to unravel the pathophysiology of the disease is limited by the lack of patients To give insight into the current state of genetic diagnostics the authors have classified the cardiovascular diseases

Gene Transfer in the Cardiovascular System Keith L. March, 1997-03-31 The goal of gene transfer is protein expression a process brought about by the insertion of a gene coding for a foreign protein into target cells resulting in the synthesis of the foreign protein For gene therapy a transferred therapeutic gene must be expressed at a level beneficial for the patient This chapter provides an introductory overview of the rapidly evolving field of non viral approaches for gene delivery to mammalian cells Although

currently there are fewer ongoing clinical trials using non viral approaches than those using viral based systems the number of non viral trials is increasing The long range goal of some research groups is the development of a genetically engineered artificial virus targeted to specific cells in the human body An annual conference organized by Cambridge Healthtech Institute entitled Artificial Self Assembling Systems for Gene Transfer brings together researchers interested in this field 1 Assembly of an artificial virus is very complex other research groups aim to develop simpler delivery systems consisting of a plasmid combined with delivery agents Viral based systems are very successful for gene delivery but despite their successes viral based systems have some general limitations and system specific limitations When employing a viral based system the following limitations should be considered size limitation of the inserted gene due to packaging constraints e.g. adenovirus retrovirus potential tumorigenesis e.g. retrovirus potential for insertional mutagenesis greater than plasmid based systems potential immunogenicity e.g.

Myocardial Damage Juan Carlos Kaski, David W. Holt, 2013-03-09 The spectrum of unstable coronary syndromes has been the object of steadily increasing research particularly in respect of novel diagnostic and treatment modalities Although the WHO criteria for the diagnosis of acute myocardial infarction have been known for decades there is still much debate as to the proper use of these especially the handling of biochemical markers Traditional enzymes have limitations in diagnostic power and new markers have unclarified applicability with regard to standardisation of assays and decision limits Furthermore the growing understanding of the conception of minimal myocardial damage in the borderzone between unstable angina pectoris and myocardial infarction necessitates refinement in the definitions of the various entities within the kaleidoscope of acute myocardial ischaemia There has been a strong impetus within the European Society of Cardiology to present this subject to a broad audience of cardiologists and as a consequence the theme of biochemical markers has become an important constituent of the Education and Training Programmes of the Society This book has fundamental implications for the overall comprehension of this complex area This book on myocardial damage compiled by international experts will truly appeal to the basic scientist as well as the clinician searching for updated knowledge of the pathophysiology and risk stratification of unstable coronary syndromes

Progress in Catheter Ablation Liong Bing Liem, Eugene Downar, 2001 The clinician nowadays is faced with a wide and often confusing choice of new instruments and methods of ablation There are few if any comparative studies involving the various new tools nor is there any compilation of data on any specific new discovery It is timely to provide a review of available data on the progress of new technology in order to enhance our knowledge and to concentrate our efforts into the development of an ultimate practical and yet effective methodology The purpose of this publication is to provide a forum in which the authors can present their experience even if only in its preliminary stages in the respective field or technology Various technological advancements in mapping and ablation as well as the improved understanding of the pathophysiology of the various arrhythmias are presented The authors are selected for their interest and expertise on the subject Each topic is presented in

a concise form and with relevance to the development of new technology The authors are encouraged to provide their opinion on the issues to stimulate further discussion and investigation *Delayed Preconditioning and Adaptive Cardioprotection* G.F. Baxter,Derek M. Yellon,2012-12-06 Interest in the ability of myocardium to adapt to ischaemic stress has continued to grow since the discovery of ischaemic preconditioning in 1986 In 1993 two reports heralded the recognition of a delayed preconditioning response in the heart now commonly known as the second window of protection Since then a number of studies have described the ability of delayed preconditioning and related adaptive phenomena to protect against a variety of pathologies in the ischaemic and reperfused myocardium Our understanding of the cellular mechanisms of sub acute adaptive cardioprotection has advanced considerably during this period This compilation of state of the art reviews by those who have made significant contributions to this field provides detailed and critical analysis of this research from molecular basis to potential clinical relevance The book aims to provide an authoritative comprehensive and thoroughly up to date overview for scientists and clinicians engaged in or observing this rapidly developing area of heart research It will also be of interest to those engaged in research on other tissues where ischaemia reperfusion pathology is of major concern

Grossman & Baim's Cardiac Catheterization, Angiography, and Intervention Mauro Moscucci,2013-10-05 Grossman Baim s Cardiac Catheterization Angiography and Intervention 8e is the premier reference on cardiac catheterization and appeals to seasoned practitioners residents and cardiology fellows This title reflects the rapid evolution and growing clinical use of hemodynamic data and of imaging and interventional techniques
