Animal Cell Bioreactors Chester S. Ho, 2013-10-22 *Animal Cell Bioreactors* provides an introduction to the underlying principles and strategies in the in vitro cell culture biotechnology. It addresses engineering aspects such as mass transfer instrumentation and control ensuring successful design and operation of animal cell bioreactors. The goal is to provide a comprehensive analysis and review in the advancement of the bioreactor systems for large scale animal cell cultures. The book is organized into four parts. Part I traces the historical development of animal cell biotechnology. It presents examples of work in progress that seeks to make animal cell biotechnology processes as productive on a cost per unit of product basis as that achieved by other microbial systems. Part II includes chapters dealing with the implications of cell biology in animal cell biotechnology, protein bound oligosaccharides and their structures, the development of serum free media and its use in the production of biologically active substances and the metabolism of mammalian cells. Part III focuses on animal cell cultivation covering topics such as the fixed bed immobilized culture, three dimensional microcarriers and hydrodynamic phenomena in microcarrier cultures. Part IV discusses the design, operation and control of animal cell bioreactors. **Animal Cell**

Technology: Basic & Applied Aspects S. Kaminogawa, A. Ametani, S. Hachimura, 2012-12-06 Animal cell technology has been making tremendous progress. Originally this term reminded people of engineering for high density and large volume culture of animal cells. At present many fields of biological sciences are aiming at advance in animal cell technology. Cell culture engineering is aided not only with developments in apparatus, matrix media and computational analysis but also with new biological procedures in gene and protein technology, cell biological resources and immunological methods. Results obtained with animal cell technology are applied to production of pharmaceuticals, diagnosis reagents and food endowed with physiological functions and cell and gene therapy of animals and humans and useful for elucidating scientific phenomena. It is also essential to establish methods of evaluation for functionality and safety of newly discovered molecules and cells. The progress in animal cell technology is supported by and attributes in both of basic and applied sciences. The proceedings of the Fifth International Meeting of the Japanese Association for Animal Cell Technology (JAAC) covers the subjects above mentioned. The articles in this book will help researchers in many fields to understand the current status and future trends in animal cell technology. JAAC organized this Meeting and we express our gratitude to the members of JAAC. We gratefully acknowledge all the members of the organizing committee for their dedication in assuring the Meeting's success. For their valuable supports we also thank the Japanese BioIndustry Association and Saitama Foundation for Culture and Industry.
