Inclusive Design for a Digital World Regine M. Gilbert, 2019-12-19 What is inclusive design It is simple It means that your product has been created with the intention of being accessible to as many different users as possible For a long time the concept of accessibility has been limited in terms of only defining physical spaces However change is afoot personal technology now plays a part in the everyday lives of most of us and thus it is a responsibility for designers of apps web pages and more public facing tech products to make them accessible to all Our digital era brings progressive ideas and paradigm shifts but they are only truly progressive if everybody can participate In *Inclusive Design for a Digital World* multiple crucial aspects of technological accessibility are confronted followed by step by step solutions from User Experience Design professor and author Regine Gilbert Think about every potential user who could be using your product Could they be visually impaired Have limited motor skills Be deaf or hard of hearing This book addresses a plethora of web accessibility issues that people with disabilities face Your app might be blocking out an entire sector of the population without you ever intending or realizing it For example is your instructional text full of animated words and Emoji icons This makes it difficult for a user with vision impairment to use an assistive reading device such as a speech synthesizer along with your app correctly In *Inclusive Design for a Digital World* Gilbert covers the Web Content Accessibility Guidelines WCAG 2.1 requirements emerging technologies such as VR and AR best practices for web development and more As a creator in the modern digital era your aim should be to make products that are inclusive of all people Technology has overall increased connection and information equality around the world To continue its impact access and usability of such technology must be

Keeping Up with Emerging Technologies Nicole Hennig, 2017-06-21 The acceleration of technological change demands that today's information professionals and educators not only be constantly acquiring new knowledge and skills but also that they cultivate the ability to make sound judgments on which technologies to embrace Today's librarians and information specialists know it's imperative that they keep up with new technologies But not all technologies are equally important either within the library setting or to library patrons So how does one decide which ones to pursue and integrate into services In the uphill battle to stay current with new and emerging technologies deciding which ones to pursue and integrate into services is a major challenge A secondary problem is simply finding the time to consider the question Readers of Keeping Up with Emerging Technologies will learn all of the best practices and skills to keep up with new technologies and to analyze the ability of specific technologies to meet recognized user needs all in this single source You'll learn the best ways to gather information about new technologies and user needs to evaluate and analyze information to curate technology information for others to set up experiments and evaluate the results and to present your findings to persuade decision makers Written by the former head of user experience at MIT's library system this guidebook serves information professionals educators education technology specialists and anyone with emerging technology or innovation in their job titles It will also be useful for library administrators and those who manage these positions as well as for students seeking a technology-oriented or curriculum design career path in libraries
