C.S.R. Murthy, 2012 *Ad Hoc Wireless Networks: Architectures and Protocols* Idris Ibrahim, Dr, Dr. Idris Al-Skloul Ibrahim, 2011-07 Providing a convenient routing protocol for MANETs is a challenge because of the dynamic topology Therefore the suitability of each routing protocol depends on many parameters such as network size node mobility speed and traffic load All that together with the dynamic nature of MANETs made an optimum routing protocol selection a complicated task Extensive nodal mobility of MANETs makes multi hop routing a genuine challenge The frequent topology changes and variable propagation conditions make a routing table obsolete very quickly which results in enormous control overhead for route discovery and maintenance In this book we develop and present a new hybrid routing protocol called Multipath Distance Vector Zone Routing Protocol which is referred to as MDVZRP In MDVZRP we assume that all the routes in the routing table are active and usable at anytime unless the node received or discovered a broken link There is no need to periodically update the routing tables therefore reducing the periodic update messages and hence reducing the control traffic in the entire network The protocol guarantees loop freedom and alternative disjoint paths **Ad Hoc and Sensor Wireless**
