Data Analysis Josh Correll, Abigail M. Folberg, Charles M. Judd, Gary H. McClelland, Carey S. Ryan, 2025-08-04 This essential textbook provides an integrated treatment of data analysis for the social and behavioral sciences It covers all the key statistical models in an integrated manner that relies on the comparison of models of data estimated under the rubric of the general linear model The text describes the foundational logic of the unified model comparison framework It then shows how this framework can be applied to increasingly complex models including multiple continuous and categorical predictors as well as product predictors i e interactions and nonlinear effects The text also describes analyses of data that violate assumptions of independence homogeneity and normality The analysis of nonindependent data is treated in some detail covering standard repeated measures analysis of variance and providing an integrated introduction to multilevel or hierarchical linear models and logistic regression Highlights of the fourth edition include Expanded coverage of generalized linear models and logistic regression in particular A discussion of power and ethical statistical practice as it relates to the replication crisis An expanded collection of online resources such as PowerPoint slides and test bank for instructors additional exercises and problem sets with answers new data sets practice questions and R code Clear and accessible this text is intended for advanced undergraduate and graduate level courses in data analysis Access the Instructor Resources for this title at routledgegettextbooks.com/textbooks/instructor_downloads

Mastering Java for Data Science Alexey Grigorev, 2017-04-27 Use Java to create a diverse range of Data Science applications and bring Data Science into production About This Book An overview of modern Data Science and Machine Learning libraries available in Java Coverage of a broad set of topics going from the basics of Machine Learning to Deep Learning and Big Data frameworks Easy to follow illustrations and the running example of building a search engine Who This Book Is For This book is intended for software engineers who are comfortable with developing Java applications and are familiar with the basic concepts of data science Additionally it will also be useful

for data scientists who do not yet know Java but want or need to learn it If you are willing to build efficient data science applications and bring them in the enterprise environment without changing the existing stack this book is for you What You Will Learn Get a solid understanding of the data processing toolbox available in Java Explore the data science ecosystem available in Java Find out how to approach different machine learning problems with Java Process unstructured information such as natural language text or images Create your own search engine Get state of the art performance with XGBoost Learn how to build deep neural networks with DeepLearning4j Build applications that scale and process large amounts of data Deploy data science models to production and evaluate their performance In Detail Java is the most popular programming language according to the TIOBE index and it is a typical choice for running production systems in many companies both in the startup world and among large enterprises Not surprisingly it is also a common choice for creating data science applications it is fast and has a great set of data processing tools both built in and external What is more choosing Java for data science allows you to easily integrate solutions with existing software and bring data science into production with less effort This book will teach you how to create data science applications with Java First we will revise the most important things when starting a data science application and then brush up the basics of Java and machine learning before diving into more advanced topics We start by going over the existing libraries for data processing and libraries with machine learning algorithms After that we cover topics such as classification and regression dimensionality reduction and clustering information retrieval and natural language processing and deep learning and big data Finally we finish the book by talking about the ways to deploy the model and evaluate it in production settings Style and approach This is a practical guide where all the important concepts such as classification regression and dimensionality reduction are explained with the help of examples The British National Bibliography Arthur James Wells,2009 **MYSQL FOR DATA ANALYSIS AND**
