

BOSE® 802 Professional Loudspeaker System

SPECIFICATIONS

GENERAL

The BOSE 802 Professional Loudspeaker System consists of two speaker enclosures (cabinets) and a separate Active Equalizer. Each cabinet contains eight identical, high-efficiency, full-range drivers. The drivers each have an impedance of one ohm and are wired in series to give a system impedance of eight ohms. The cabinet also includes an Impedance Control Capacitor which controls the system impedance at high frequencies, reducing the amplifier power requirements of the system.

Each driver has a molded, high-impact polymer frame that reduces flux leakage to maintain high efficiency. The driver voice coils are made of flat aluminum ribbon, edge-wound on an aluminum bobbin for high efficiency and high power handling ability. Each driver has a 12-ounce ceramic magnet for high efficiency and resistance to demagnetization.

Each enclosure incorporates two Reactive Air Columns that function to reduce driver cone excursion at very low frequencies. This allows the 802 to produce high output levels at deep bass frequencies with a minimum of distortion.

The cabinet is composed of mica-filled, high-density polyethylene structural foam. This reinforced polymer material combines light weight, high strength, and impact resistance for ruggedness in transportation.

The 802-E Equalizer adjusts the spectrum of the audio signal, permitting the 802 system to provide broad, flat frequency response without using woofers, horns, or crossover networks that cause audible coloration. The Equalizer must be used with the system to achieve satisfactory performance.
