Building Interactive Systems Philip Gray, Roger Took, 2013-03-09 Architectures and tools are two important considerations in the construction of interactive computer systems The former is concerned with the optimal structural organisation of systems and the latter with the effective support of the design and management of user interfaces They are regarded as the areas of research most likely to contribute to the development of existing interactive systems in particular by providing improved architectures capable of supporting new styles of interaction and more sophisticated software tools to improve productivity This volume combines the proceedings of two workshops held in York and Glasgow which concentrated on architectures and tools respectively In doing so it addresses the problems of user interface construction from two complementary viewpoints and provides alternative perspectives on many of the central issues Some of the papers are published in expanded form to provide a more comprehensive coverage of the topics and two additional papers have been included which offer a useful insight into issues raised by the workshops The papers address formal and theoretical concerns as well as academic and commercial ones Specific topics covered include novel input models architectures for real time systems and object oriented user interface tools for X widgets NeWS and Smalltalk based applications The papers also include presentations of new tools and architectural designs

Building Interactive Systems Architectures and Tools provides the most extensive recent account of research into the relationship between architectures and tools in the construction of interactive computer systems and will be of interest to researchers postgraduate students and software developers

Engineering Human Computer Interaction and Interactive Systems Rémi Bastide, Philippe Palanque, Jörg Roth, 2005-07-11 As its name suggests the EHCI DSVIS conference has been a

special event merging two different although overlapping research communities EHCI Engineering for Human Computer Interaction is a conference organized by the IFIP 2.7.13.4 working group started in 1974 and held every three years since 1989 The group's activity is the scientific investigation of the relationships among the human factors in computing and software engineering DSVIS Design Specification and Verification of Interactive Systems is an annual conference started in 1994 and dedicated to the use of formal methods for the design of interactive systems Of course these two research domains have a lot in common and are informed by each other's results The year 2004 was a good opportunity to bring closer these two research communities for an event the 11th edition of DSVIS and the 9th edition of EHCI EHCI DSVIS was set up as a working conference bringing together researchers and practitioners interested in strengthening the scientific foundations of user interface design specification and verification and in examining the relationships between software engineering and human computer interaction The call for papers attracted a lot of attention and we received a record number of submissions out of the 65 submissions 23 full papers were accepted which gives an acceptance rate of approximately 34% Three short papers were also included The contributions were categorized in 8 chapters Chapter 1 Usability and Software Architecture contains three contributions which advance the state of the art in usability approaches for modern software engineering

Introduction to Human-Computer Interaction Kasper Hornbæk, Per Ola Kristensson, Antti Oulasvirta, 2025-06-06 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations Aimed at undergraduate students in computer science design and engineering programs and master students in dedicated programs this is the first comprehensive textbook for students of human computer interaction While HCI is primarily a research driven field the book focuses not only on scientific principles of interaction but also on the very concrete goal of designing better computing systems The book revises and synthesizes topics that have been previously scattered across multiple books and papers including design engineering empirical methods and technology Although it covers emerging topics like VR and AI the book places its emphasis on the more time enduring principles and methods The book is open access and comes with associated materials for teachers and students available on the book's companion website *Human-Computer Interaction* Hans-Jörg Bullinger, Jürgen Ziegler, Hans-Jörg Bullinger, Jürgen Ziegler, 1999-09-01 This volume one of a two volume set is from the August 1999 HCI International conference papers presented in Munich Germany Human Computer Interaction Communication Cooperation and Application Design focuses on the informative and communicative aspects of computer use A larger number of contributions is concerned with computer supported cooperation using a wide variety of different techniques In keeping with the increased focus of HCI International 99 on internet issues and aspects of the global information society many papers in this volume are centered around information and communication networks and their implications for work learning and every day activities Due to the growing number and diversity of groups utilizing modern

information technologies issues of accessibility and design for all are becoming more and more pertinent A range of papers in this volume address these issues and provide the latest research and development results

Design, Specification and Verification of Interactive Systems '97 Michael D. Harrison, Juan C. Torres, 2012-12-06 An increasing recognition of the role of the human system interface is leading to new extensions and styles of specification Techniques are being developed that facilitate the expression of user oriented requirements and the refinement and checking of specifications of interactive systems This book reflects the state of the art in this important area and also contains a summary of working group discussions about how the various techniques represented might be applied to a common case study

Interaction for Visualization Christian Tominski, 2022-06-01 Visualization has become a valuable means for data exploration and analysis Interactive visualization combines expressive graphical representations and effective user interaction Although interaction is an important component of visualization approaches much of the visualization literature tends to pay more attention to the graphical representation than to interaction The goal of this work is to strengthen the interaction side of visualization Based on a brief review of general aspects of interaction we develop an interaction oriented view on visualization This view comprises five key aspects the data the tasks the technology the human as well as the

implementation Picking up these aspects individually we elaborate several interaction methods for visualization We introduce a multi threading architecture for efficient interactive exploration We present interaction techniques for different types of data e g multivariate data spatio temporal data graphs and different visualization tasks e g exploratory navigation visual comparison visual editing With respect to technology we illustrate approaches that utilize modern interaction modalities e g touch tangibles proxemics as well as classic ones While the human is important throughout this work we also consider automatic methods to assist the interactive part In addition to solutions for individual problems a major contribution of this work is the overarching view of interaction in visualization as a whole This includes a critical discussion of interaction the identification of links between the key aspects of interaction and the formulation of research topics for future work with a focus on interaction
