Optimizing Processes with RFID and Auto ID Norbert Bartneck, Volker Klaas, Holger Schönherr, 2009-03-17 Radio Frequency Identification RFID is the technology applied for unambiguous and contactless identification of all types of objects Varying magnetic fields or radio waves enable contactless data transfer as well as fast automatic data collection In addition the importance of optical codes gains further importance due to their specific advantages RFID and Auto ID systems are used in a wide range of sectors from the consumer goods industry and trade via the automobile and aerospace industries to the chemicals and pharmaceuticals industries as well as logistics and transport

facilities New potentials to secure competitive advantages can be utilized with early planning of the application of RFID and Auto ID in procurement manufacturing and logistics In addition to RFID and Auto ID technology this book presents applications from different areas of application which have already been tried and tested They demonstrate the approach the process and the selection of RFID and Auto ID systems for various problems A perspective on trends and innovative security solutions shows possible future application options for this technology , **Manufacturing Execution System - MES**

Jürgen Kletti, 2007-05-01 The transformation of the classic factory from a production facility into a modern service center has resulted in management problems for which many companies are not yet prepared The economic efficiency of modern value creation is not a property of the products but rather of the process What this means is that the decisive potentials of companies are to be found not so much in their production capability but in their process capability For manufacturers the requirement for process capability which has in the meantime become the basis of the certification codes gives rise in turn to the requirement that all value adding processes be geared to the process result and thus to the customer A necessary condition of process transparency is the ability to map the company's value stream in real time without the acquisition process involving major outlay a capability which is beyond the dominant ERP systems Today modern manufacturing execution systems MES can offer real time applications They generate current and even historical maps for production equipment and can thus be used as a basis for optimization processes As early as the beginning of the 1980s work started on methods of this kind which were then known as production data acquisition or machine data collection But while the main emphasis in the past was on achieving improvements in machine utilization today the concern is predominantly to obtain real time mapping of the value stream supply chain **Manual of Classification of Patents** United States.
