Question 5

The graph above shows the mass of plants from two different species over time. The plants grew while attached to each other. The plants were separated at the time indicated by the vertical line in the graph.

Using template 1, **graph** the predicted shape of the plant-mass lines after separation of the two plants if the plants were in an obligate mutualistic relationship. On template 2, **graph** the predicted shape of the plant-mass lines if the species 2 plant was a parasite of the species 1 plant. **Justify** each of your predictions. (4 points)

TEMPLATE 1: OBLIGATE MUTUALISM

TEMPLATE 2: PARASITISM

	Graph characteristics (1 point each graph; 2 points maximum)	Justification (1 point each box; 2 points maximum)
Obligat Mutualism	Both of the growth curves level off or decline.	- Each species depends on the other for survival. - Without the relationship, both species are harmed.
Parasitism	Species 1 continues to increase while species 2 levels off or declines.	- The parasite requires an association with the host to survive but harms the host. - Without the relationship, the parasite cannot survive while the host continues to grow.

Guide to College Majors 2008 Princeton Review, Princeton Review Publishing Staff, 2005-02 Provides information on over three hundred common college majors from accounting to zoology including related fields prior high school subjects possible courses of study and career and salary prospects for graduates Developing Assessments for the Next Generation Science Standards National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Testing and Assessment, Committee on Developing Assessments of Science Proficiency in K-12, 2014-05-29 Assessments understood as tools for tracking what and how well students have learned play a critical role in the classroom Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K 12 Science Education Framework and Next Generation Science Standards NGSS These documents are brand new and the changes they call for are barely under way but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education The new Framework and the NGSS are designed to guide educators in significantly altering the way K 12 science is taught The Framework is aimed at making science education more closely resemble the way scientists actually work and think and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time It structures science education around three dimensions the practices through which scientists and engineers do their work the key crosscutting concepts that cut across disciplines and the core ideas of the disciplines and argues that they should be interwoven in every aspect of science education building in sophistication as students progress through grades K 12 Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework This report reviews recent and current work in science assessment to determine which aspects of the Framework s vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework s vision should consist of assessments designed to support classroom instruction assessments designed to monitor science learning on a broader scale and indicators designed to track opportunity to learn New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students

Evolution, 2011-11-07 Serpins are a group of proteins with similar structures that were first identified as a set of proteins able to inhibit proteases This volume in the Methods in Enzymology series comprehensively covers this topic With an international board of authors this volume covers subjects such as Crystallography of serpins and serpin complexes Serpins as hormone transporters and Production of serpins using cell free systems This volume in the Methods in Enzymology series comprehensively covers the topic of serpins With an international board of authors this volume covers subjects such as Crystallography of serpins and serpin complexes Serpins as hormone transporters and Production of serpins using cell free systems

Virtual Screening Christoph Sotriffer, 2011-03-31 Drug discovery is all about finding small molecules that interact in a desired way with larger molecules namely proteins and other macromolecules in the human body If the three dimensional structures of both the small and large molecule are known their interaction can be tested by computer simulation with a reasonable degree of accuracy Alternatively if active ligands are already available molecular similarity searches can be used to find new molecules This virtual screening can even be applied to compounds that have yet to be synthesized as opposed to real screening that requires cost and labor intensive laboratory testing with previously synthesized drug compounds Unique in its focus on the end user this is a real how to book that does not presuppose prior experience in virtual screening or a background in computational chemistry It is both a desktop reference and practical guide to virtual screening applications in drug discovery offering a comprehensive and up to date overview Clearly divided into four major sections the first provides a detailed description of the methods required for and applied in virtual screening while the second discusses the most important challenges in order to improve the impact and success of this technique The third and fourth practical parts contain practical guidelines and several case studies covering the most important scenarios for new

drug discovery accompanied by general guidelines for the entire workflow of virtual screening studies Throughout the text medicinal chemists from academia as well as from large and small pharmaceutical companies report on their experience and pass on priceless practical advice on how to make best use of these powerful methods
