Innate Immunity of Plants, Animals and Humans Holger

Heine,2016-05-01 All living organisms are in a constant battle against their environment Since uncontained microorganisms would simply overgrow all higher animals the evolution of multicellular organisms required adequate and efficient defense mechanisms to protect their own integrity and to ensure their own survival These defense mechanisms encompassing receptor proteins that sense the presence of pathogens and effector molecules that are involved in controlling them are the elemental parts of the innate immune system For many species the innate immune system is the sole active defense system Long thought to be an unspecific immune response the discovery of the Toll like receptors and their ligands finally revealed just how specific the innate immune response actually is This book wants to give an overview of our current knowledge about the innate immune system of plants animals and humans It not only covers the innate immune mechanisms and responses of so diverse organisms such as plants Cnidaria Drosophila urochordates and zebrafish but also the major receptor systems in mammals and humans as well as the central defense mechanisms antimicrobial peptides and the complement system

Immunity Anthony L. DeFranco,Richard M. Locksley,Miranda Robertson,2007 An understanding of the immune system is central to the understanding of how the body interacts with its surroundings Presenting an insight into this biological system this book leads students through both innate and adaptive immunity how infection is detected and how the cells of the immune system interact to generate a response
