A Textbook of Electrical Technology Volume I: Basic Electrical Engineering B L Theraja & A K Theraja, A Textbook of Electrical Technology Volume I Basic Electrical Engineering Evolutionary Algorithms for Solving Multi-Objective Problems Carlos Coello Coello, David A. Van Veldhuizen, Gary B. Lamont, 2013-03-09 Researchers and practitioners alike are increasingly turning to search optimization and machine learning procedures based on natural selection and natural genetics to solve problems across the spectrum of human endeavor These genetic algorithms and techniques of evolutionary computation are solving problems and inventing new hardware and software that rival human designs The Kluwer Series on Genetic Algorithms and Evolutionary Computation publishes research monographs edited collections and graduate level texts in this rapidly growing field Primary areas of coverage include the theory implementation and application of genetic algorithms GAs evolution strategies ESs evolutionary programming EP learning classifier systems LCSs and other variants of genetic and evolutionary computation GEC The series also publishes texts in related fields such as artificial life adaptive behavior artificial immune systems agent based systems neural computing fuzzy systems and quantum computing as long as GEC techniques are part of or inspiration for the system being described This encyclopedic volume on the use of the algorithms of genetic and evolutionary computation for the solution of multi objective problems is a landmark addition to the literature that comes just in the nick of time Multi objective evolutionary algorithms MOEAs are receiving increasing and unprecedented attention Researchers and practitioners are finding an irresistible match between the population available in most genetic and evolutionary algorithms and the need in multi objective problems to approximate the Pareto trade off curve or surface Soft Computing for Problem Solving Kedar Nath Das, Jagdish Chand Bansal, Kusum Deep, Atulya K. Nagar, Ponnambalam Pathipooranam, Rani Chinnappa Naidu, 2019-11-27 This two volume book presents the outcomes of the 8th International Conference on Soft Computing for Problem Solving SocProS 2018 This conference was a joint technical collaboration between the Soft Computing Research Society Liverpool Hope University UK and Vellore Institute of Technology India and brought together researchers engineers and practitioners to discuss thought provoking developments and challenges in order to select potential future directions The book highlights the latest advances and innovations in the interdisciplinary areas of soft computing including original research papers on algorithms artificial immune systems artificial neural networks genetic algorithms genetic programming and particle swarm optimization and applications control systems data mining and clustering finance weather forecasting game theory business and forecasting applications It offers a valuable resource for both young and experienced researchers dealing with complex and intricate real world problems that are difficult to solve using traditional methods Probability, Random Variables, and Random Signal Principles Peyton Z. Peebles, 1993 Today any well designed electrical engineering curriculum must train engineers to account for noise and random signals in systems The best approach is to emphasize fundamental principles since systems can vary

greatly Professor Peebles's book specifically has this emphasis offering clear and concise coverage of the theories of probability random variables and random signals including the response of linear networks to random waveforms By careful organization the book allows learning to flow naturally from the most elementary to the most advanced subjects Time domain descriptions of the concepts are first introduced followed by a thorough description of random signals using frequency domain Practical applications are not forgotten and the book includes discussions of practical noises noise figures and noise temperatures and an entire special chapter on applications of the theory Another chapter is devoted to optimum networks when noise is present matched filters and Wiener filters This third edition differs from earlier editions mainly in making the book more useful for classroom use Beside the addition of new topics Poisson random processes measurement of power spectra and computer generation of random variables the main change involves adding many new end of chapter exercises 180 were added for a total of over 800 exercises The new exercises are all clearly identified for instructors who have used the previous edition
