The 'Compile' option is highlighted. The main editor window shows the source code for 'GccApplication3.c', which includes a header file and a main function. The code uses the 'avr/io.h' header and defines a 'main' function that toggles a pin (PORTB) with a 100ms delay. The right-hand side of the IDE shows the 'Solution Explorer' and 'Properties' windows. The 'Output' window at the bottom displays the compilation process, including the command used to compile the file and the successful completion of the build.
