Figure 2 shows the results of the regression analysis. The results indicate that the regression model is significant at the 0.05 level, $F(1, 11) = 10.00$, $p < 0.05$. The regression equation is $y = 0.0001x + 0.0001$, where y is the dependent variable (the number of correct responses) and x is the independent variable (the number of correct responses).

Small size research design is the appropriate solution for the study of the effect of the number of variables on the dependent variable. The study of the effect of the number of variables on the dependent variable is a complex task. The study of the effect of the number of variables on the dependent variable is a complex task.
