Book And Brain Grounded Theory Temporal Spatial Design:

Brain-Grounded Theory of Temporal and Spatial Design Yoichi Ando, 2016-03-03 In this book brain grounded theory of temporal and spatial design in architecture and the environment is discussed. The author believes that it is a key to solving such global problems as environmental disorders and severe climate change as well as conflicts that are caused by the ill conceived notion of time is money. There are three phases or aspects of a person's life: the physical life, the spiritual or mental life, and the third stage of life when a person moves from middle age into old age and can choose what he or she wishes to do instead of simply what must be done. This book describes the temporal design of the environment based on the theory of subjective preference which could make it possible for an individual to realize a healthy life in all three phases. In his previously published work the present author wrote that the theory of subjective preference has been established for the sound and visual fields based on neural evidence and that subjective preference is an overall response of cooperating temporal and spatial factors associated with the brain's left and right hemispheres respectively. In this book based on that theory some examples are shown for the temporal design of architecture and the environment which may play important roles in the development of personality thus inducing creativity. Also discussed is how all individuals may find their own personality and develop it according to the preferred direction of their individual lives.

Signal Processing in Auditory Neuroscience Yoichi Ando, 2018-05-22 *Signal Processing in Auditory Neuroscience: Temporal and Spatial Features of Sound and Speech* discusses how the physical attributes of different sounds manifest in neural signals and how to tease apart their different influences. It includes EEG/MEG as additional variables to be considered when studying neural mechanisms of auditory processing in general, specifically in speech. Focuses on signal processing in human auditory neuroscience. Contains information that will be useful to researchers using a MEG/EEG recording of brain activity to study neural mechanisms of auditory processing and speech. Gives an important overview and methodological background for techniques that are useful in human auditory neuroscience.

Emerging Technologies for Next Generation Learning Spaces Bosede Iyiade Edwards, Nurbiha A. Shukor, Adrian David Cheok, 2021-08-07 This book discusses the development of the next generation learning spaces with emerging technologies. These spaces result from the combined needs of classroom stakeholders such as instructors and learners with classroom elements such as tools and technologies, pedagogy and content. The book presents discussions and studies on issues, possibilities and implications of these changes for next generation education. Novel ideas and studies on these all encompassing blended roles of technologies in next generation learning spaces are clearly presented. Suggestions on how the benefits they offer can be maximized are also discussed. Engaging learning technologies have remained central in education for assisting instructors to teach and learners to learn more effectively. However, recent technological growth is creating a system in which previous divides between key classroom concepts and stakeholders are getting progressively blurred. This is giving rise to next generation learning spaces where elements and stakeholders are

blended into one The book addresses the future of learning environments based on these perspectives **Embodied and grounded cognition** Anna Borghi,Diane Pecher,2012-01-01 In the last 10 15 years the embodied and grounded cognition approach has become widespread in all fields related to cognitive science such as cognitive and social psychology neuroscience philosophy anthropology computational modelling and robotics According to this approach our cognitive activity is grounded in sensory motor processes and situated in specific contexts and situations Therefore in this view concepts consist of the reactivation of the same neural pattern that is present when we perceive and or interact with the objects they refer to In the same way understanding language would imply forming a mental simulation of what is linguistically described This simulation would entail the recruitment of the same neurons that are activated when actually acting or perceiving the situation action emotion object or entity described by language In the last years a lot of evidence has been collected in favour of EC and GC view The aim of this Research Topic is twofold First it intends to give an idea of the field of embodied and grounded cognition in its broadness We therefore intend to invite scientists of different disciplines anthropology philosophy linguistics cognitive and social psychology neuroscience computer science to submit their proposals The second aim of this Research Topic is to focus on some challenges that in our opinion embodied and grounded theories of cognition need to face First we believe that one important challenge for EC and GC views is to account for the way the so called abstract concepts and abstract words are represented Evidence on the representation of concrete concepts and words is compelling whereas evidence on abstract concepts representation is still too scarce and limited to restricted domains We therefore welcome proposals dealing with this complex issue Second we think that embodied and grounded theories of cognition would need to formulate more precise hypotheses and that in general within the field a larger theoretical effort should be made It is striking that even if a lot of work in the field of computational modelling and robotics starts from an embodied approach experimental and modelling work on embodied cognition remain somehow separate We therefore invite researchers to submit papers proposing models which might help to explain phenomena as well as to constrain and specify in more detail the predictions and the claims advanced within the framework of EC and GC theories *Cr ative SYNAPSE * Ariel Orama L pez,2014-03-11 Dr Ariel Orama L pez published a new theoretical framework based on Creativity and the recent findings of Neuroscience the textbook is called CR ATIVE SYNAPSE CR ATE YOUR UNIVERSE 2013 It is the first theoretical framework that explains the behavior of the human being by integrating the following variables creativity neuroscience and the new influence of the virtual universe The collection book will be presented in the atrium of the Museo de Arte de Puerto Rico on Wednesday September 11 2013 in a distinguished context of artists health professionals and academics Dr Gregory J Quirk a prominent American researcher specialized in Neuroscience Luca Spaghetti the well known Italian amico writer who served as a guide to Elizabeth Gilbert on her journey through Italy while writing Eat Pray Love elaborated the prologues of this substantial investigative work of thirteen years they provide in their prologues a nourished

The role of body and environment in cognition Dermot Lynott, Judith Holler, Louise Connell, 2014-08-25 Recent evidence has shown many ways in which our bodies and the environment influence cognition In this Research Topic we aim to develop our understanding of cognition by considering the diverse and dynamic relationship between the language we use our bodily perceptions and our actions and interactions in the broader environment There are already many empirical effects illustrating the continuity of mind body environment manipulating body posture influences diverse areas such as mood hormonal responses and perception of risk directing attention to a particular sensory modality can affect language processing signal detection and memory performance placing implicit cues in the environment can impact upon social behaviours moral judgements and economic decision making This Research Topic includes papers that explore the question of how our bodies and the environment influence cognition such as how we mentally represent the world around us understand language reason about abstract concepts make judgements and decisions and interact with objects and other people Contributions focus on empirical theoretical methodological or modelling issues as well as opinion pieces or contrasting perspectives Topic areas include perception and action social cognition emotion language processing modality specific representations spatial representations gesture atypical embodiment perceptual simulation cognitive modelling and perspectives on the future of embodiment

Action and Language Integration in Cognitive Systems Angelo Cangelosi, 2012-07-12 Recent theoretical and experimental research on action and language processing in humans and animals clearly demonstrates the strict interaction and co dependence between language and action This has been demonstrated in neuroscientific investigations e g Cappa Pulvermuller 2003 Rizzolatti Pecher Massera et al 2008 All these studies have important implication both for the understanding of the action basis of cognition in natural and artificial cognitive systems as well as for the design of cognitive and communicative capabilities in robots Cangelosi et al 2005 The journal *Frontiers in Neurorobotics* is seeking submissions of new articles in the topic of action and language integration both in natural cognitive systems e g humans and animals and in artificial cognitive agents robots and simulated agents Manuscripts can regard new theoretical and computational investigations as well as new neuroscientific and psychological investigations Review articles in this topic are also welcome

Future Cities - City Futures Christian

Veddeler, Joran Kuijper, Michal Gath-Morad, Iris van der Wal, 2023-04-13 The book is about future cities and possible scenarios for city futures. A question central to this book is how to face urban challenges while providing and safeguarding positive outcomes concerned with the improvement of the quality of urban life. How can future cities be made more liveable, sustainable and resilient? How can cities continue to provide a wide range of opportunities for all necessities of life? To tackle these complex questions, the book includes a collection of 25 articles written by 37 emerging voices in urban design and research. Together, they contribute from a diverse spectrum of interest, expertise, academic disciplines and practice. They approach the built environment from a socio-cultural, respectively socio-economic perspective from the viewpoint of urban policy and public health with environmental concerns for urban sustainability and circularity in mind and through the lens of urban computer and data science, providing a take on urban digitalization and transformation of cities into smart cities. Together, their contributions reflect the complexity and diversity of challenges and opportunities underpinning future cities. Future Cities: City Futures intends to be a platform for transdisciplinary urban discourse.
