Book And Digitizing Identities Networked Routledge Technology:

Digitizing Identities Irma van der Ploeg, Jason Pridmore, 2015-11-19 This book explores contemporary transformations of identities in a digitizing society across a range of domains of modern life As digital technology and ICTs have come to pervade virtually all aspects of modern societies the routine registration of personal data has increased exponentially thus allowing a proliferation of new ways of establishing who we are Rather than representing straightforward progress however these new practices generate important moral and socio political concerns While access to and control over personal data is at the heart of many contemporary strategic innovations domains as diverse as migration management law enforcement crime and health prevention e governance internal and external security to new business models and marketing tools we also see new forms of exclusion exploitation and disadvantage emerging *Future Courses of Human Societies* Kléber Ghimire, 2018-06-14 The future as a field of inquiry debate or forecasts continues to flourish However this book differs from existing literature in several important ways It is not another publication on future scenarios guided by a linear technological fix nor is it simply a volume of new statistics on economic demographic or geopolitical developments Rather *Future Courses of Human Societies* explores and builds a general framework for the long term evolution of human societies Drawing upon a wide range of insights from across the social and natural sciences the authors of this title present original exploratory methodological and analytical approaches to examining the future Encouraging the reader to deepen their knowledge and encourage critical thinking three themes are considered in their complexity and multi dimensionality technological innovations future progress and the critical aspect of organizing collective life in the future Furthermore in contrast to previous studies which have embraced a relatively short time span this text incorporates perspectives from the immediate to the distant future extending to several centuries and even millennia An interdisciplinary and internationally comprehensive volume *Future Courses of Human Societies* is a key source for students and researchers interested in fields such as future studies technology in society interdisciplinary learnings on social and natural sciences and future economic and political evolutions **Adolescents and Their Social Media Narratives** Jill Walsh, 2017-09-11 Adolescents are forging a new path to self development taking advantage of the technology at their fingertips to produce desired results In *Adolescents and Their Social Media Narratives* Walsh specifically explores how social media impacts teenagers personal development Indeed through unique empirical data Walsh presents an aspect of teen media use that is not often documented in the press the seemingly deep and meaningful process of evaluating the self visually in an attempt to reconcile their presentation with their internal self story Nevertheless as Walsh outlines this is not a process without its challenges Tracking teenagers progress towards self validation from the offline stages preceding online exhibitions this enlightening volume will appeal to undergraduate and postgraduate students scholars and researchers interested in fields such as Social Media Studies Sociology of Adolescence Identity Formation Developmental Psychology and Society and Technology *Scientific*

Imperialism Uskali Mäki, Adrian Walsh, Manuela Fernández Pinto, 2017-10-16 The growing body of research on interdisciplinarity has encouraged a more in depth analysis of the relations that hold among academic disciplines In particular the incursion of one scientific discipline into another discipline s traditional domain also known as scientific imperialism has been a matter of increasing debate Following this trend Scientific Imperialism aims to bring together philosophers of science and historians of science interested in the topic of scientific imperialism and in particular interested in the conceptual clarification empirical identification and normative assessment of the idea of scientific imperialism Thus this innovative volume has two main goals Indeed the authors first seek to understand interdisciplinary relations emerging from the incursion of one scientific discipline into one or more other disciplines such as in cases in which the conventions and procedures of one discipline or field are imposed on other fields or more weakly when a scientific discipline seeks to explain phenomena that are traditionally considered proper of another discipline s domain Secondly the authors explore ways of distinguishing imperialistic from non imperialistic interactions between disciplines and research fields The first sustained study of scientific imperialism this volume will appeal to postgraduate students and postdoctoral researchers interested in fields such as Science and Technology Studies Sociology of Science Technology Philosophy of Science and History of Science
