Beyond the Networked City Olivier Coutard, Jonathan Rutherford, 2015-12-14 Cities around the world are undergoing profound changes In this global era we live in a world of rising knowledge economies digital technologies and awareness of environmental issues The so called modern infrastructural ideal of spatially and socially ubiquitous centrally governed infrastructures providing exclusive homogeneous services over extensive areas has been the standard of reference for the provision of basic essential services such as water and energy supply This book argues that after decades of undisputed domination this ideal is being increasingly questioned and that the network ideology that supports it may be waning In order to begin exploring the highly diverse fluid and unstable landscapes emerging beyond the networked city this book identifies dynamics through which a break with previous configurations has been operated and new brittle zones of socio technical controversy through which urban infrastructure and its wider meaning are being negotiated and fought over It uncovers across a diverse set of urban contexts new ways in which processes of urbanization and infrastructure production are being combined with crucial sociopolitical implications through shifting political economies of infrastructure which rework resource distribution and value creation through new infrastructural spaces and territorialities which rebundle socio technical systems for particular interests and claims and through changing offsets between individual and collective appropriation experience and mobilization of infrastructure With contributions from leading authorities in the field and drawing on theoretical advances and original empirical material this book is a major contribution to an ongoing infrastructural turn in urban studies and will be of interest to all those concerned by the diverse forms and contested outcomes of contemporary urban change across North and South

Redeploying Urban Infrastructure Jonathan

Rutherford,2019-07-31 This book explores urban futures in the making as seen through the lens of urban infrastructure The book describes how socio technical arrangements of energy and water provision are being recast in continuing efforts towards realising sustainable transformation of cities It critically investigates how infrastructure comes to matter by analyzing the shifting capacities and entanglements of diverse actors with these systems the various means they use to envision enact and contest changes and the wide ranging social and political implications of emerging infrastructure transitions Drawing on original research into urban infrastructure debates and projects in Stockholm and Paris the author develops a novel conceptual framework for studying and acknowledging the active vital role of infrastructure in constituting a material politics of urban transformation Straddling the latest theoretical insights and empirical investigation of urban planning practice and socio technical engineering of systems and flows Redeploying Urban Infrastructure forges new timely reflections and perspectives which will be of interest to the growing multidisciplinary community of scholars investigating infrastructure and to academics and practitioners with a concern for understanding the wider politics of urban futures

Urban Infrastructure Remo Dalla Longa,2023-03-01 The book deals with the concept of urban infrastructure and the strong evolution of globalization in particular the driving force taken by global cities Urban infrastructure is a constituent part of the global cities both have a synergistic evolution The main reference is to western global cities in the intertwining of financialization settling and brownfield which is a little different from the urbanization of other global cities of other non developed countries or emerging countries There is therefore a significant link between globalization and urban infrastructure The occurrence of slowbalization can have consequences on urban areas infrastructures and more generally on the different dichotomy between global city and nation With the pandemic infectious and the post COVID there is already a different configuration between the global city and the rest of the national territory A driving element of the urban infrastructure and the global city has been the financialization and identification of assets within global cities Urban infrastructure as an asset has grown considerably in the last two decades in the wake of what has already been highlighted previously for real estate There are contiguous issues that affect the concept of urban infrastructures and they are the enormous growth of finance and the landings of this in the great cities of the world with investments that first involved Real Estate and then urban infrastructures There has also been a technological revolution that has merged the ubiquitous technological infrastructure with other more traditional components of the infrastructure even apparently recent themes

such as smart cities come from this evolutionary trend and merge with urban infrastructures The theme of smart cities if properly interpreted gives strength to the concept of urban infrastructure *Handbook of Infrastructures and Cities* Olivier Coutard, Daniel Florentin, 2024-04-12 Contributing towards a thriving research area this comprehensive Handbook presents a broad discussion of infrastructure as social phenomena It compiles diverse perspectives to delineate the current infrastructural turn and assess policy and research challenges relating to contemporary forms of infrastructural development

Making Spaces through Infrastructure Marian Burchardt, Dirk Laak, 2023-07-04 Infrastructures are fundamental means through which societies create spaces but little is known about the precise ways in which this occurs How have infrastructures animated certain understandings of space How do infrastructures stabilize or undermine the spatial formats in which we live which shape our everyday practices and which regulate access to services and resources And conversely how do spaces frame the ways infrastructural provision is organized How do existing spaces shape infrastructural development and the scope and forms of access to vital services such as transport and water In this volume historians and sociologists draw on a range of fascinating case studies and provide compelling answers to these questions Exploring among others the provision of irrigation water in nineteenth century Los Angeles the invention of airport transit zones and the infrastructural practices of homeless people in Berlin the book demonstrates how the making of spaces through infrastructure is deeply political Intent on revealing uneven geographies of provision and hierarchies of access the contributors highlight how infrastructures are products of global entanglements Citizenship and Infrastructure Charlotte Lemanski, 2019-02-22 This book brings together insights from leading urban scholars and explicitly develops the connections between infrastructure and citizenship It demonstrates the ways in which adopting an infrastructural citizenship lens illuminates a broader understanding of the material and civic nature of urban life for both citizens and the state Drawing on examples of housing water electricity and sanitation across Africa and Asia chapters reveal the ways in which exploring citizenship through an infrastructural lens and infrastructure through a citizenship lens allows us to better understand plan and govern city life The book emphasises the importance of acknowledging and understanding the dialectic relationship between infrastructure and citizenship for urban theory and practice This book will be a useful resource for researchers and students within Urban Studies Geography Development Studies Planning Politics Architecture and Sociology **Elgar**

Encyclopedia of Corruption and Society Luís de Sousa, Susana Coroado, 2024-05-02 Delving into the phenomenology of corruption and its impacts on the governance of societies this cutting edge Encyclopedia considers what makes corruption such a resilient complex and global priority for study This title contains one or more Open Access entries *Lifelines of Our Society* Dirk Van Laak, 2023-08-01 A comprehensive history and examination of global infrastructures and the outsized role they play in our lives Infrastructure is essential to defining how the public functions yet there is little public knowledge regarding why and how it became today's strongest global force over government and individual lives Who should build and

maintain infrastructures How are they to be protected And why are they all in such bad shape In *Lifelines of Our Society* Dirk van Laak offers broad audiences a history of global infrastructures focused on Western societies over the past two hundred years that considers all their many paradoxes He illustrates three aspects of infrastructure their development their influence on nation building and colonialism and finally how individuals internalize infrastructure and increasingly become not only its user but regulator Beginning with public works infrastructure in the nineteenth century carried the hope that it would facilitate world peace Van Laak shows how instead it transformed to promote consumerism s individual freedoms and our notions of work leisure and fulfillment *Lifelines of Our Society* reveals how today s infrastructure is both a source and a reflection of concentrated power and economic growth which takes the form of cities under permanent construction Symbols of power van Laak describes come with vulnerability and this book illustrates the dual nature of infrastructure s potential to hold nostalgia and inspire fear to ease movement and govern ideas and to bring independence to the nuclear family and control governments of the Global South
