Beyond The Frustrated Self Overcoming Avoidant Patterns And Opening To Life:

Beyond the Frustrated Self Barbara Dowds, 2018-05-11 This book foregrounds the life struggles of an individual Brenda in such a way that argument and theoretical exploration arise organically out of experience The frustration of the title is traced to avoidant attachment pretending not to need others In Brenda this is associated with a body energy pattern that is both over charged and over contained generating a self frustrating process Such a repressive defence works against her so that she experiences her life as dry soulless and uncreative A variety of existential difficulties are traced to how such core developmental issues interact with our socio cultural environment A way forward is outlined play and finding meaning are identified as transformational hubs that bring wellbeing into Brenda s life and restore her capacity for experiencing

Depression and the Erosion of the Self in Late Modernity Barbara Dowds, 2018-04-19 Depression is not a disease of the brain a genetic disability or even a mood disorder Rather shutdown numbness or sadness are non pathological adaptations to adverse childhood and adult environments This challenging book thus understands depression as a wise response to an unliveable situation It can teach us what is wrong with our lives and what we must learn in order to go beyond symptom relief and reconnect to our most fundamental needs relational existential and spiritual Because moods shape how we engage with our outer and inner worlds they underlie all human behaviour If the sociocultural world is toxic or frustrates our core needs we will withdraw to protect ourselves Those who have encountered a non facilitating environment in childhood will be even more sensitive to adult stresses since their self organisation is fragile and non resilient As depression is so complex understanding it demands an integrative approach

Depression Barbara Dowds, 2021-04-19 This book attempts to do justice to the depth and complexity of depression as to its causes and its treatment in psychotherapy It challenges the reductive medical view of depression as a serotonin deficiency resulting in a collection of undesirable symptoms to be dispatched with antidepressants or CBT exercises Rather it locates the origins of depression in childhood adversity primarily caused by unattuned cold critical hostile or abusive caregiving Insecure attachment interacts with other elements of a stressful life history as well as with genetic makeup to pave the way for depression Such a childhood has long term impacts on the setting of the stress and threat responses of the nervous system Depression fundamentally indicates a weak and non resilient sense of self coupled with limited capacities for trust and either autonomy or intimacy in relationships These are the issues that must be tackled in psychotherapy Since depression carries a message for the sufferer it must be investigated for its meaning Why has the individual withdrawn from life and what are they being asked to change in how they live and relate Before this reparative and creative phase of therapy can begin however we must remember that depression is not just low mood but also stuck mood Rigid beliefs and processes that block therapeutic engagement can be gently questioned by helping the client see that they are held by only one part of the self whereas other for growth parts carry hope and a willingness to play and explore Overall it is crucial in working with depression to see and to relate to the client as a whole
