Modern Electrochemistry 2A John O'M. Bockris, Amulya K.N. Reddy, Maria E. Gamboa-Aldeco, 2007-05-08 This book had its nucleus in some lectures given by one of us J O M B in a course on electrochemistry to students of energy conversion at the University of Pennsylvania It was there that he met a number of people trained in chemistry physics biology metallurgy and materials science all of whom wanted to know something about electrochemistry The concept of writing a book about electrochemistry which could be understood by people with very varied backgrounds was thereby engendered The lectures were recorded and written up by Dr Klaus Muller as a 293 page manuscript At a later stage A K N R joined the effort it was decided to make a fresh start and to write a much more comprehensive text Of methods for direct energy conversion the electrochemical one is the most advanced and seems the

most likely to become of considerable practical importance Thus conversion to electrochemically powered transportation systems appears to be an important step by means of which the difficulties of air pollution and the effects of an increasing concentration in the atmosphere of carbon dioxide may be met Corrosion is recognized as having an electrochemical basis The synthesis of nylon now contains an important electrochemical stage Some central biological mechanisms have been shown to take place by means of electrochemical reactions A number of American organizations have recently recommended greatly increased activity in training and research in electrochemistry at universities in the United States

revolutions technological dynamics have been the cause of many environmental problems and there is a consensus on the diagnosis Integrated technologies reduce resource use and or pollution at source by using cleaner production methods This generally leads to a reduction in the by products energy inputs and resources used by companies to produce goods Integrated production technologies reduce negative environmental impacts at source by substituting or modifying cleaner technologies Examples of integrated or cleaner production technologies are the recirculation of materials the use of environmentally friendly materials such as the substitution of water for organic solvents etc However the implementation of integrated production technologies is often hampered by obstacles related to cost coordination and skill inertia problems and to the productive organisation of companies In addition to the high investment costs of new integrated technologies additional barriers may emerge depending on the nature of the environmental problem and the type of environmental regulation in question
