in the context of learning and applying physics**

In the third edition of this well-loved and highly regarded undergraduate textbook, authors Harvey Gould and Jan Tobochnik are joined by Wolfgang Christian for a thorough and programmatic update using their commitment to teach physics programming through the use of modern tools and techniques. The text includes the essential theory for modeling and solving physics concepts and their applications through computer simulation. This new edition uses object-oriented programming and the development of good programming habits in the context of using physics. Department for Physics, the text offers individuals with a wide variety of backgrounds and abilities the tools to explore

physical phenomena with their material on force, complex systems, rigid body dynamics, and relativity.
