Quantitative Portfolio Management Pierre Brugière, 2020-03-28 This self contained book presents the main techniques of quantitative portfolio management and associated statistical methods in a very didactic and structured way in a minimum number of pages The concepts of investment portfolios self financing portfolios and absence of arbitrage opportunities are extensively used and enable the translation of all the mathematical concepts in an easily interpretable way All the results tested with Python programs are demonstrated rigorously often using geometric approaches for optimization problems and intrinsic approaches for statistical methods leading to unusually short and elegant proofs The statistical methods concern both parametric and non parametric estimators and to estimate the factors of a model principal component analysis is explained The presented Python code and web scraping techniques also make it possible to test the presented concepts on market data This book will be useful for teaching Masters students and for professionals in asset management and will be of interest to academics who want to explore a field in which they are not specialists The ideal prerequisites consist of undergraduate probability and statistics and a familiarity with linear algebra and matrix manipulation Those who want to run the code will have to install Python on their pc or alternatively can use Google Colab on the cloud Professionals will need to have a quantitative background being either portfolio managers or risk managers or potentially quants wanting to double check their understanding of the subject

Beyond Multiple Linear Regression Paul Roback, Julie Legler, 2021-01-14 Beyond Multiple Linear Regression Applied Generalized Linear Models and Multilevel Models in R is designed for undergraduate students who have successfully completed a multiple linear regression course helping them develop an expanded modeling toolkit that includes non normal responses and correlated structure Even though there is no mathematical prerequisite the authors still introduce fairly sophisticated topics such as likelihood theory zero inflated Poisson and parametric bootstrapping in an intuitive and applied manner The case studies and exercises feature real data and real research questions thus most of the data in the textbook comes from collaborative research conducted by the authors and their students or from student projects Every chapter features a variety of conceptual exercises guided exercises and open ended exercises using real data After working through this material students will develop an expanded toolkit and a greater appreciation for the wider world of data and statistical modeling A solutions manual for all exercises is available to qualified instructors at the book's website at www.routledge.com and data sets and Rmd files for all case studies and exercises are available at the authors GitHub repo <https://github.com/proback/BeyondMLR>

Statistics for Health Data Science Ruth Etzioni, Micha Mandel, Roman

Gulati,2021-01-04 Students and researchers in the health sciences are faced with greater opportunity and challenge than ever before The opportunity stems from the explosion in publicly available data that simultaneously informs and inspires new avenues of investigation The challenge is that the analytic tools required go far beyond the standard methods and models of basic statistics This textbook aims to equip health care researchers with the most important elements of a modern health analytics toolkit drawing from the fields of statistics health econometrics and data science This textbook is designed to overcome students anxiety about data and statistics and to help them to become confident users of appropriate analytic methods for health care research studies Methods are presented organically with new material building naturally on what has come before Each technique is motivated by a topical research question explained in non technical terms and accompanied by engaging explanations and examples In this way the authors cultivate a deep organic understanding of a range of analytic techniques their assumptions and data requirements and their advantages and limitations They illustrate all lessons via analyses of real data from a variety of publicly available databases addressing relevant research questions and comparing findings to those of published studies Ultimately this textbook is designed to cultivate health services researchers that are thoughtful and well informed about health data science rather than data analysts This textbook differs from the competition in its unique blend of methods and its determination to ensure that readers gain an understanding of how when and why to apply them It provides the public health researcher with a way to think analytically about scientific questions and it offers well founded guidance for pairing data with methods for valid analysis Readers should feel emboldened to tackle analysis of real public datasets using traditional statistical models health econometrics methods and even predictive algorithms Accompanying code and data sets are provided in an author site <https://roman.gulati.github.io/statistics-for-health-data-science>
