An Object Description Language for Distributed Discrete Event Simulations Harold Gregory Andrews, 2001 The language structure follows the notions of stimulus response and completely isolates simulation object instances from each other Inter object communication occurs solely through message passing Several example applications are described **Event Simulation** Udo W. Pooch, James A. Wall, 2024-11-01 Discrete Event Simulation is a process oriented text reference that utilizes an eleven step model to represent the simulation process from problem formulation to implementation and documentation The book presents the necessary level of detail required to fully develop a model that produces meaningful results and considers the tools necessary to interpret those results Sufficient background information is provided so that the underlying concepts of simulation are understood Major topics covered in Discrete Event Simulation include probability and distributional theory statistical estimation and inference the generation of random variates verification and validation techniques time management methods experimental design and programming language considerations The book also examines distributed simulation and issues related to distributing the physical process over a network of tightly coupled processors Topics covered in this area include deadlock synchronization rollback event management and communication processes Fully worked examples and numerous practical exercises have been drawn from the engineering disciplines and computer science although they have been structured so that they will be useful as well to other disciplines such as economics business administration and management science The presentation of techniques and methods in Discrete Event Simulation make it an ideal text reference for all practitioners of discrete event simulation Discrete-Event Modeling and Simulation Gabriel A. Wainer, Pieter J. Mosterman, 2018-09-03 Collecting the work of the foremost scientists in the field Discrete Event Modeling and Simulation Theory and Applications presents the state of the art in modeling discrete event systems using the discrete event system specification DEVS approach It introduces the latest advances recent extensions of formal techniques and real world examples of various applications. The book covers many topics that pertain to several layers of the modeling and simulation architecture It discusses DEVS model development support and the interaction of DEVS with other methodologies It describes different forms of simulation supported by DEVS the use of real time DEVS simulation the relationship between DEVS and graph transformation the influence of DEVS variants on simulation performance and interoperability and composability with emphasis on DEVS standardization The text also examines extensions to DEVS new formalisms and abstractions of DEVS models as well as the theory and analysis behind real world system identification and control To support the generation and search of optimal models of a system a framework is developed based on the system entity structure and its transformation to DEVS simulation models In addition the book explores numerous interesting examples that illustrate the use of DEVS to build successful applications including optical network on chip construction building design process control workflow systems and environmental models A one stop resource on advances in DEVS

theory applications and methodology this volume offers a sampling of the best research in the area a broad picture of the DEVS landscape and trend setting applications enabled by the DEVS approach It provides the basis for future research discoveries and encourages the development of new applications **Discrete Event Simulations** Eldin Wee Chuan Lim, 2012-09-06 The Discrete Event Simulation DES method has received widespread attention and acceptance by both researchers and practitioners in recent years The range of application of DES spans across many different disciplines and research fields In research further development and advancements of the basic DES algorithm continue to be sought while various hybrid methods derived by combining DES with other simulation techniques continue to be developed This book presents state of the art contributions on fundamental development of the DES method novel integration of the method with other modeling techniques as well as applications towards simulating and analyzing the performances of various types of systems This book will be of interest to undergraduate and graduate students researchers as well as professionals who are actively engaged in DES related work Design and Implementation of Symbolic Computation Systems Alfonso Miola, 1990-03-26 The growing importance of the systems for symbolic computation has greatly influenced the decision of organizing DISCO 90 which is short for International Symposium on Design and Implementation of Symbolic Computation Systems DISCO 90 focuses mainly on the most innovative methodological and technological aspects of hardware and software system design and implementation for Symbolic and Algebraic Computation Automated Reasoning Software Environments Languages and User Interfaces and Automatic Programming In particular it includes papers on the design and the development of significant running systems. The vision of a real time enterprise RTE which is able to sense and analyze events from internal and external sources and perform adequate re actions has been envisaged by manufacturing enterprises Daniel Metz presents a framework based on EDA and CEP towards the realization of RTE in manufacturing The framework closes the vertical integration gap and further establishes feedback in near real time among enterprise levels As such the framework provides a holistic and closed loop control of manufacturing processes and encompasses results and insights from management engineering and computer science The framework has been implemented for a small and medium sized foundry in Germany The developed control approach has led to a significant increase in manufacturing processes efficiency i e performance quality and availability Esprit '89 CEC, DG for Telecommunications, 2012-12-06 The 6th ESPRIT Conference is being held in Brussels from the 27th November to the 1 st December 1989 Well over 1500 participants from all over Europe are expected to attend the various events during the week The Conference will offer the opportunity to be updated on the results of ongoing Esprit projects and to develop Europe wide contacts with colleagues both within a specific branch of Information Technology and across different branches The first three days of the week are devoted to presentations of Esprit I projects structured into plenary and parallel sessions this year there is special emphasis on panels and workshops where participants can exchange ideas and hold in depth discussions on specific topics The different areas of Esprit work are covered Microelectronics Information Processing Systems Office and Business Systems Computer Integrated Manufac turing Basic Research and different aspects of the Information Exchange System During the IT Forum on Thursday 30th November major European industrial and political decision makers will address the audience in the morning In the afternoon different aspects of Technology Transfer will be discussed with the participation of outside experts and presentations on the future plans for community R D in IT will take place
