Issues and Challenges of Intelligent Systems and

Computational Intelligence László T. Kóczy, Claudiu R. Pozna, Janusz Kacprzyk, 2014-01-11 This carefully edited book contains contributions of prominent and active researchers and scholars in the broadly perceived area of intelligent systems. The book is unique both with respect to the width of coverage of tools and techniques and to the variety of problems that could be solved by the tools and techniques presented. The editors have been able to gather a very good collection of relevant and original papers by prominent representatives of many areas relevant both to the theory and practice of intelligent systems: artificial intelligence, computational intelligence, soft computing and the like. The contributions have been divided into 7 parts presenting first more fundamental and theoretical contributions and then applications in relevant areas.

Computational Models of Brain and Behavior Ahmed A. Moustafa, 2017-09-11 A comprehensive Introduction to the world of brain and behavior computational models. This book provides a broad collection of articles covering different aspects of computational modeling efforts in psychology and neuroscience. Specifically, it discusses models that span different brain regions: hippocampus, amygdala, basal ganglia, visual cortex, different species: humans, rats, fruit flies, and different modeling methods: neural network, Bayesian reinforcement learning, data fitting, and Hodgkin Huxley models among others. Computational Models of Brain and Behavior is divided into four sections: a) Models of brain disorders, b) Neural models of behavioral processes, c) Models of neural processes, brain regions, and neurotransmitters, and d) Neural modeling approaches. It provides in-depth coverage of models of psychiatric disorders including depression, posttraumatic stress disorder, PTSD, schizophrenia, and dyslexia; models of neurological disorders including Alzheimer's disease, Parkinson's disease, and epilepsy; early sensory and perceptual processes; models of olfaction; higher systems level models and low level models; Pavlovian and instrumental conditioning; linking information theory to neurobiology and more. Covers computational approximations to intellectual disability in Down syndrome. Discusses computational models of pharmacological and immunological treatment in Alzheimer's disease. Examines neural circuit models of serotonergic system from microcircuits to cognition. Educates on information theory, memory, prediction, and timing in associative learning. Computational Models of Brain and Behavior is written for advanced undergraduate, Master's and PhD level students as well as researchers involved in computational neuroscience modeling research.
