Festschrift is a collection of articles contributed by colleagues collaborators and past students to honor Professor John T Katsikadelis on the occasion of his 70 years Professor Katsikadelis now an emeritus professor at the National Technical University of Athens in Greece is one of the BEM pioneers who started his research in this field with his PhD thesis at the Polytechnic Institute of New York in the 1970s and continued it to date The book comprises 26 contributions by more than 50 leading researchers in Boundary Element Methods BEM and other Mesh Reduction Methods MRM All contributors are well known scientists from Asia Australia Europe and North and South America The volume is essentially a collection of both original and review articles covering a variety of research topics in the areas of solid mechanics fluid mechanics potential theory composite materials fracture mechanics damage mechanics plasticity heat transfer dynamics and vibrations and soil

structure interaction Invaluable to scientists engineers and other professionals interested in the latest developments of the boundary integral equation methods it addresses the needs of the BEM computational mechanics research community The book is written for researchers in academia and industry and graduate students focusing on solid and fluid mechanics as used in civil mechanical and aerospace engineering [Encyclopedia of Environmental Health](#) ,2019-08-22 Encyclopedia of Environmental Health Second Edition Six Volume Set presents the newest release in this fundamental reference that updates and broadens the umbrella of environmental health especially social and environmental health for its readers There is ongoing revolution in governance policies and intervention strategies aimed at evolving changes in health disparities disease burden trans boundary transport and health hazards This new edition reflects these realities mapping new directions in the field that include how to minimize threats and develop new scientific paradigms that address emerging local national and global environmental concerns Represents a one stop resource for scientifically reliable information on environmental health Fills a critical gap with information on one of the most rapidly growing scientific fields of our time Provides comparative approaches to environmental health practice and research in different countries and regions of the world Covers issues behind specific questions and describes the best available scientific methods for environmental risk assessment

Modelling the Human Body Exposure to ELF Electric Fields Cristina Peratta,Andres Peratta,2010 The objective of this book is to describe techniques to investigate the behaviour of electric fields and induced currents in the human body exposed to different scenarios of extremely low frequency ELF high voltage low current electromagnetic fields by means of numerical modelling with improved Boundary Element Methods BEM A variety of three dimensional anatomically shaped human body models under different exposure conditions are presented and solved The mathematical formulation for the case of human exposure to ELF electromagnetic fields departing from Maxwell equations and for the electrical properties of biological tissue is provided The underpinning ideas of the Boundary Element Method applied to ELF fields in the human body are presented A literature survey including electrical properties of tissues relevant to low frequency calculations has been compiled and included in one chapter A novel improved BEM approach is introduced in order to solve this type of problems leading to more accurate results and more efficient calculations The developed methodology is applied to three different case studies i overhead power transmission lines ii power substation rooms and iii pregnant woman including foetus and evolving scenarios In all the cases a sensitivity analysis investigating the influence of varying geometrical and electrical properties of the tissues has been conducted The results obtained allow to identify situations of high and low exposure in the different parts of the body and to compare with existing exposure guidelines *Boundary Collocation Techniques and their Application in Engineering* J.A. Kołodziej,A. P. Zielinski,2009-10-01 Methods of mathematical modelling applied in contemporary computational mechanics can be divided into purely numerical and analytical numerical procedures In this book the first part is a general presentation of the boundary collocation approach and its numerous variants and in the

second part the method is applied to many engineering problems *Interpolatory Methods for Model Reduction* A. C. Antoulas, C. A. Beattie, S. Güçer, 2020-01-13 Dynamical systems are a principal tool in the modeling prediction and control of a wide range of complex phenomena As the need for improved accuracy leads to larger and more complex dynamical systems direct simulation often becomes the only available strategy for accurate prediction or control inevitably creating a considerable burden on computational resources This is the main context where one considers model reduction seeking to replace large systems of coupled differential and algebraic equations that constitute high fidelity system models with substantially fewer equations that are crafted to control the loss of fidelity that order reduction may induce in the system response Interpolatory methods are among the most widely used model reduction techniques and *Interpolatory Methods for Model Reduction* is the first comprehensive analysis of this approach available in a single extensive resource It introduces state of the art methods reflecting significant developments over the past two decades covering both classical projection frameworks for model reduction and data driven nonintrusive frameworks This textbook is appropriate for a wide audience of engineers and other scientists working in the general areas of large scale dynamical systems and data driven modeling of dynamics
