Steel Connection Design by Inelastic Analysis (IDEA StatiCa), Mustafa Mahamid, Mark Denavit, Ali Nassiri, Halil Sezen, Martin Vild, 2024-10-15. Comprehensive resource on the finite element method in structural steel connection design through verification with AISC 360 provisions. Steel Connection Design by Inelastic Analysis covers the use of the finite element method in structural steel connection design. Verification with AISC 360 provisions is presented focusing on the Component Based Finite Element Method (CBFEM), a novel approach that provides the global behavior and verification of resistance for the design of structural steel connections. This method is essential for fast and practical design and evaluation of connections with different levels of geometry and complexity. Detailed modeling and verification examples with references to AISC and other relevant publications are included throughout the text, along with roughly 250 illustrations to aid in reader comprehension. Readers of this text will benefit from understanding at least the basics of structural design ideally through civil structural or mechanical engineering programs of study. Written by a team of six highly qualified authors, Steel Connection Design by Inelastic Analysis includes information on T-stub connections, single plate shear connections, bracket plate connections, beam over column connections, and end plate moment connections. Bolted wide flange splice connections, temporary splice connections, and chevron brace connections in a braced frame. Brace connections at beam-column connection in a braced frame and double angle simple beam-to-column connections. Semi-rigid beam-to-column connections covering code design calculations and comparisons. IDEA StatiCa analysis and ABAQUS analysis. Steel Connection Design by Inelastic Analysis is an authoritative reference on the subject for structural engineers.
