Encyclopedia of Portal Technologies and Applications Tatnall, Arthur, 2007-04-30 Informatique *Handbook Of Metadata, Semantics And Ontologies* Miguel-angel Sicilia, 2013-12-17 Metadata research has emerged as a discipline cross cutting many domains focused on the provision of distributed descriptions often called annotations to Web resources or applications Such associated descriptions are supposed to serve as a foundation for advanced services in many application areas including search and location personalization federation of repositories and automated delivery of information Indeed the Semantic Web is in itself a concrete technological framework for ontology based metadata For example Web based social networking requires metadata describing people and their interrelations and large databases with biological information use complex and detailed metadata schemas for more precise and informed search strategies There is a wide diversity in the languages and idioms used for providing meta descriptions from simple structured text in metadata schemas to formal annotations using ontologies and the technologies for storing sharing and exploiting meta descriptions are also diverse and evolve rapidly In addition there is a proliferation of schemas and standards related to metadata resulting in a complex and moving technological landscape hence the need for specialized knowledge and skills in this area The Handbook of Metadata Semantics and Ontologies is intended as an authoritative reference for students practitioners and researchers serving as a roadmap for the variety of metadata schemas and ontologies available in a number of key domain areas including culture biology education healthcare engineering and library science

Orłowska, 2003-08-03 This book constitutes the refereed proceedings of the 5th Asia Pacific Web Conference APWeb 2003 held in Xian China in April 2003 The 39 revised full papers and 16 short papers presented together with two invited papers were carefully reviewed and selected from a total of 136 submissions The papers are organized in topical sections on XML and database design efficient XML data management XML transformation Web mining Web clustering ranking and profiling payment and security Web application architectures advanced applications Web multimedia network protocols workflow management systems advanced search and data allocation and replication

Fundamentals of Information Systems Interoperability Stefanie Rinderle-Ma, Jürgen Mangler, Daniel Ritter, 2024-04-18 This book presents fundamental concepts and technologies to tackle interoperability between information systems It details interoperability at the data service and process level and combines theoretical foundations with hands on presentation of technologies to enable the development of sound and practical integration Chapter 1 details general interoperability challenges and describes the

structure of the book To start with Chapter 2 presents technologies for the exchange of data between two selected and highly relevant data formats i e relational databases and XML Next Chapter 3 explains concepts for schema matching and mapping and data integration as well as the technological basis for implementing them based on query and transformation languages like XPath and XSLT Chapter 4 then turns to service interoperability and explains two related technologies REST and GraphQL in detail In Chapter 5 fundamentals for designing process orchestrations at the conceptual level are presented focusing on how to model process orchestrations and how to verify their correctness and soundness and showing BPMN as the de facto modeling standard Chapter 6 then details the concepts and languages for the implementation of process orchestrations including the presentation of execution languages for process orchestrations that are equipped with a formal semantics e g Workflow Nets the Refined Process Structure Tree and CPEE Trees Subsequently Chapter 7 focuses on the growing number of distributed loosely coupled and often non interoperable applications through the concepts of enterprise application integration and explains these by an implementation in CPN Tools and by two case studies Eventually Chapter 8 is lifting the orchestration and integration concepts and technologies to the choreography level by dealing with the interoperability between different process orchestrations Chapter 9 concludes the book by featuring success factors for interoperability projects It also provides a range of open research directions for interoperability such as compliance sensor fusion and blockchain technologies The book is mainly intended as a textbook to be used for developing and teaching courses on interoperability and integration To this end it is accompanied by a Web site with additional teaching materials It also spans a bridge from researchers to graduate students and practitioners by providing a deep understanding on practical interoperability challenges and solutions The focus here is put on de facto standards and open source systems and tools to enable interoperability solutions at low cost
