An Algebraic Approach To Association Schemes Lecture Notes In Mathematics:

An Algebraic Approach to Association Schemes Paul-Hermann Zieschang, 2006-11-13 The primary object of the lecture notes is to develop a treatment of association schemes analogous to that which has been so successful in the theory of finite groups The main chapters are decomposition theory representation theory and the theory of generators Tits buildings come into play when the theory of generators is developed Here the buildings play the role which in group theory is played by the Coxeter groups The text is intended for students as well as for researchers in algebra in particular in algebraic combinatorics

Theory of Association Schemes Paul-Hermann Zieschang, 2005-10-20 This book is a concept oriented treatment of the structure theory of association schemes The generalization of Sylow's group theoretic theorems to scheme theory arises as a consequence of arithmetical considerations about quotient schemes The theory of Coxeter schemes equivalent to the theory of buildings emerges naturally and yields a purely algebraic proof of Tits' main theorem on buildings of spherical type

Algebraic Combinatorics Eiichi Bannai, Etsuko Bannai, Tatsuro Ito, Rie Tanaka, 2021-02-22 Algebraic combinatorics is the study of combinatorial objects as an extension of the study of finite permutation groups or in other words group theory without groups In the spirit of Delsarte's theory this book studies combinatorial objects such as graphs codes designs etc in the general framework of association schemes providing a comprehensive overview of the theory as well as pointing out to extensions Investigations in Algebraic Theory of Combinatorial Objects I.A. Faradzev, A.A. Ivanov, M. Klin, A.J.

Woldar, 2013-06-29 X K chendorffer L A Kalu lnin and their students in the 50s and 60s Nowadays the most deeply developed is the theory of binary invariant relations and their combinatorial approximations These combinatorial approximations arose repeatedly during this century under various names Hecke algebras centralizer rings association schemes coherent configurations cellular rings etc see the first paper of the collection for details and in various branches of mathematics both pure and applied One of these approximations the theory of cellular rings cellular algebras was developed at the end of the 60s by B Yu Weisfeiler and A A Leman in the course of the first serious attempt to study the complexity of the graph isomorphism problem one of the central problems in the modern theory of combinatorial algorithms At roughly the same time G M Adelson Velski V L Arlazarov I A Faradtey and their colleagues had developed a rather efficient tool for the constructive enumeration of combinatorial objects based on the branch and bound method By means of this tool a number of sports like results were obtained Some of these results are still unsurpassed Association Schemes R. A. Bailey, 2004-02-26

Association schemes are of interest to both mathematicians and statisticians and this book was written with both audiences in mind For statisticians it shows how to construct designs for experiments in blocks how to compare such designs and how to analyse data from them The reader is only assumed to know very basic abstract algebra For pure mathematicians it tells why association schemes are important and develops the theory to the level of advanced research This book arose from a course successfully taught by the author and as such the material is thoroughly class tested There are a great number of

examples and exercises that will increase the book's appeal to both graduate students and their instructors. It is ideal for those coming either from pure mathematics or statistics backgrounds who wish to develop their understanding of association schemes.

The Arcata Conference on Representations of Finite Groups, Part 1 Paul Fong, 1987. The papers in these proceedings of the 1986 Arcata Summer Institute bear witness to the extraordinarily vital and intense research in the representation theory of finite groups. The confluence of diverse mathematical disciplines has brought forth work of great scope and depth. Particularly striking is the influence of algebraic geometry and cohomology theory in the modular representation theory and the character theory of reductive groups over finite fields and in the general modular representation theory of finite groups. The continuing developments in block theory and the general character theory of finite groups is noteworthy. The expository and research aspects of the Summer Institute are well represented by these papers.

Coding Theory and Design Theory Dijen Ray-Chaudhuri, 2012-12-06. This IMA Volume in Mathematics and its Applications Coding Theory and Design Theory Part I. Coding Theory is based on the proceedings of a workshop which was an integral part of the 1987-88 IMA program on APPLIED COMBINATORICS. We are grateful to the Scientific Committee Victor Klee, Chairman, Daniel Kleitman, Dijen Ray Chaudhuri, and Dennis Stanton for planning and implementing an exciting and stimulating year-long program. We especially thank the Workshop Organizer Dijen Ray Chaudhuri for organizing a workshop which brought together many of the major figures in a variety of research fields in which coding theory and design theory are used.

A vner Friedman Willard Miller Jr. PREFACE. Coding Theory and Design Theory are areas of Combinatorics which found rich applications of algebraic structures. Combinatorial designs are generalizations of finite geometries. Probably the history of Design Theory begins with the 1847 paper of Reverend T. P. Kirkman, "On a problem of Combinatorics," Cambridge and Dublin Math Journal. The great Statistician R. A. Fisher reinvented the concept of combinatorial 2-design in the twentieth century. Extensive application of algebraic structures for construction of 2-designs, balanced incomplete block designs, can be found in R. C. Bose's 1939 Annals of Eugenics paper, "On the construction of balanced incomplete block designs." Coding Theory and Design Theory are closely interconnected. Hamming codes can be found in disguise in R. C. Bose's 1947 Sankhya paper, "Mathematical theory of the symmetrical factorial designs."

Special Functions 2000: Current Perspective and Future

Directions Joaquin Bustoz, Mourad E.H. Ismail, Sergei Suslov, 2012-12-06. The Advanced Study Institute brought together researchers in the main areas of special functions and applications to present recent developments in the theory, review the accomplishments of past decades and chart directions for future research. Some of the topics covered are orthogonal polynomials and special functions in one and several variables, asymptotic continued fractions, applications to number theory, combinatorics and mathematical physics, integrable systems, harmonic analysis and quantum groups, Painlevé classification.

Extremal Problems for Finite Sets Peter Frankl, Norihide Tokushige, 2018-08-15. One of the great appeals of Extremal Set Theory as a subject is that the statements are easily accessible without a lot of mathematical background, yet the proofs and

ideas have applications in a wide range of fields including combinatorics number theory and probability theory Written by two of the leading researchers in the subject this book is aimed at mathematically mature undergraduates and highlights the elegance and power of this field of study The first half of the book provides classic results with some new proofs including a complete proof of the Ahlswede Khachatrian theorem as well as some recent progress on the Erdos matching conjecture The second half presents some combinatorial structural results and linear algebra methods including the Deza Erdos Frankl theorem application of Rodl s packing theorem application of semidefinite programming and very recent progress obtained in 2016 on the Erdos Szemerédi sunflower conjecture and capset problem The book concludes with a collection of challenging open problems

Hopf Algebras Jeffrey Bergen, Stefan Catoiu, William Chin, 2004-01-28 This volume publishes key proceedings from the recent International Conference on Hopf Algebras held at DePaul University Chicago Illinois With contributions from leading researchers in the field this collection deals with current topics ranging from categories of infinitesimal Hopf modules and bimodules to the construction of a Hopf algebraic
