An Introduction to Causal Analysis in Sociology Ian Birnbaum, 1981-02-19

*Models of Science Dynamics* Andrea Scharnhorst, Katy Börner, Peter van den Besselaar, 2012-01-23

*Models of Science Dynamics* aims to capture the structure and evolution of science the emerging arena in which scholars science and the communication of science become themselves the basic objects of research In order to capture the essence of phenomena as diverse as the structure of co authorship networks or the evolution of citation diffusion patterns such models can be represented by conceptual models based on historical and ethnographic observations mathematical descriptions of measurable phenomena or computational algorithms Despite its evident importance the mathematical modeling of science still lacks a unifying framework and a comprehensive study of the topic This volume fills this gap reviewing and describing major threads in the mathematical modeling of science dynamics for a wider academic and professional audience The model classes presented cover stochastic and statistical models system dynamics approaches agent based simulations population dynamics models and complex network models The book comprises an introduction and a foundational chapter that defines and operationalizes terminology used in the study of science as well as a review chapter that discusses the history of mathematical approaches to modeling science from an algorithmic historiography perspective It concludes with a survey of remaining challenges for future science models and their relevance for science and science policy

scientific and engineering sectors      **Proceedings of the Fourth International Congress on Mathematical Education**  
M. Zweng, Green, Kilpatrick, Pollack, Suydam, 2012-12-06 Henry O Pollak Chairman of the International Program Committee  
Bell Laboratories Murray Hill New Jersey USA The Fourth International Congress on Mathematics Education was held in  
Berkeley California USA August 10 16 1980 Previous Congresses were held in Lyons in 1969 Exeter in 1972 and Karlsruhe in  
1976 Attendance at Berkeley was about 1800 full and 500 associate members from about 90 countries at least half of these  
come from outside of North America About 450 persons participated in the program either as speakers or as presiders  
approximately 40 percent of these came from the U S or Canada There were four plenary addresses they were delivered by  
Hans Freudenthal on major problems of mathematics education Hermina Sinclair on the relationship between the learning of  
language and of mathematics Seymour Papert on the computer as carrier of mathematical culture and Hua Loo Keng on  
popularising and applying mathematical methods George Polya was the honorary president of the Congress illness prevented  
his planned attendance but he sent a brief presentation entitled Mathematics Improves the Mind There was a full program of  
speakers panelists debates miniconferences and meetings of working and study groups In addition 18 major projects from  
around the world were invited to make presentations and various groups representing special areas of concern had the  
opportunity to meet and to plan their future activities      *The Palgrave Handbook of Quantum Models in Social Science*  
Emmanuel Haven, Andrei Khrennikov, 2017-02-06 It is not intuitive to accept that there exists a link between quantum  
physical systems and cognitive systems However recent research has shown that cognitive systems and collective social  
systems including biology exhibit uncertainty which can be successfully modelled with quantum probability The use of such  
probability allows for the modelling of situations which typically violate the laws of classical probability The Palgrave  
Handbook of Quantum Models in Social Science is a unique volume that brings together contributions from leading experts  
on key topics in this new and emerging field Completely self contained it begins with an introductory section which gathers  
all the fundamental notions required to be able to understand later chapters The handbook then moves on to address some of  
the latest research and applications for quantum methods in social science disciplines including economics politics and  
psychology It begins with the issue of how the quantum mechanical framework can be applied to economics Chapters  
devoted to this topic range from how Fisher information can be argued to play a role in economics to the foundations and  
application of quantum game theory The handbook then progresses in considering how belief states can be updated with the  
theory of quantum measurements and also with more general methods The practical use of the Hilbert space and Fock space  
in decision theory is then introduced and open quantum systems are also considered The handbook also treats a model of  
neural oscillators that reproduces some of the features of quantum cognition Other contributions delve into causal reasoning  
using quantum Bayes nets and the role of quantum probability in modelling so called affective evaluation The handbook is  
rounded off with two chapters which discuss the grand challenges which lie ahead of us How can the quantum formalism be

justified in social science and is the traditional quantum formalism too restrictive. Finally a question is posed whether there is a necessary role for quantum mathematical models to go beyond physics. This book will bring the latest and most cutting edge research on quantum theory to social science disciplines. Students and researchers across the discipline as well as those in the fields of physics and mathematics will welcome this important addition to the literature.
