

The background of the cover is a dark blue gradient. Overlaid on this are several dynamic, flowing light streaks. A prominent streak of bright pink and magenta curves from the lower left towards the center. Another streak of bright blue and white curves from the upper right towards the center. These streaks create a sense of motion and depth, resembling light trails or energy waves.

Back-of-the-envelope Quantum Mechanics Maxim Olshanii, 2014 Dimensional and order of magnitude estimates are practiced by almost everybody but taught almost nowhere When physics students engage in their first theoretical research project they soon learn that exactly solvable problems belong only to textbooks that numerical models are long and resource consuming and that something else is needed to quickly gain insight into the system they are going to study Qualitative methods are this something else but typically students have never heard of them before The aim of this book is to teach the craft of qualitative analysis using a set of problems some with solutions and some without in advanced undergraduate and beginning graduate Quantum Mechanics Examples include a dimensional analysis solution for the spectrum of a quartic oscillator simple WKB formulas for the matrix elements of a coordinate in a gravitational well and a three line long estimate for the ionization energy of atoms uniformly valid across the whole periodic table The piece de resistance in the collection is a series of dimensional analysis questions in Integrable Nonlinear Partial Differential Equations with no dimensions existing a priori Solved problems include the relationship between the size and the speed of solitons of the Korteweg de Vries equation

and an expression for the oscillation period of a Nonlinear Schrödinger breather as a function of its width

Techniques of Asymptotic Analysis Lawrence Sirovich, 2013-12-01 These notes originate from a one semester course which forms part of the Math Methods cycle at Brown In the hope that these notes might prove useful for reference purposes several additional sections have been included and also a table of contents and index Although asymptotic analysis is now enjoying a period of great vitality these notes do not reflect a research oriented course The course is aimed toward people in applied mathematics physics engineering etc who have a need for asymptotic analysis in their work The choice of subjects has been largely dictated by the likelihood of application Also abstraction and generality have not been pursued Technique and computation are given equal prominence with theory Both rigorous and formal theory is presented very often in tandem In practice the means for a rigorous analysis are not always available For this reason a goal has been the cultivation of mature formal reasoning Therefore during the course of lectures formal presentations gradually eclipse rigorous presentations When this occurs rigorous proofs are given as exercises or in the case of lengthy proofs reference is made to the Reading List at the end

Radio Propagation and Remote Sensing of the Environment N.A. Armand, V.M. Polyakov, 2004-11-15 This book describes the processes of radio propagation and analyzes the equations that enable estimation of media It explores propagation processes and related phenomena including absorption refraction reflection and scattering It also analyzes how knowledge of radiowave properties allows accurate estimations of media via inverse problems The
