Algebraic Operads An Algorithmic Companion:

Algebraic Operads Murray R. Bremner, Vladimir Dotsenko, 2016-04-06 This book presents a systematic treatment of Grobner bases in several contexts The book builds up to the theory of Grobner bases for operads due to the second author and Khoroshkin as well as various applications of the corresponding diamond lemmas in algebra Throughout the book both the mathematical theory and computational methods are emphasized and numerous algorithms examples and exercises are provided to clarify and illustrate the concrete meaning of abstract theory

Nonsymmetric Operads in Combinatorics

Samuele Giraudo, 2019-01-04 Operads are algebraic devices offering a formalization of the concept of operations with several inputs and one output Such operations can be naturally composed to form more complex ones Coming historically from algebraic topology operads intervene now as important objects in computer science and in combinatorics A lot of operads involving combinatorial objects highlight some of their properties and allow to discover new ones This book portrays the main elements of this theory under a combinatorial point of view and exposes the links it maintains with computer science and combinatorics Examples of operads appearing in combinatorics are studied The modern treatment of operads consisting in considering the space of formal power series associated with an operad is developed Enrichments of nonsymmetric operads as colored cyclic and symmetric operads are reviewed

Two Algebraic Byways from Differential Equations:

Gröbner Bases and Quivers Kenji Iohara, Philippe Malbos, Masa-Hiko Saito, Nobuki Takayama, 2020-02-20 This edited volume presents a fascinating collection of lecture notes focusing on differential equations from two viewpoints formal calculus through the theory of Gröbner bases and geometry via quiver theory Gröbner bases serve as effective models for computation in algebras of various types Although the theory of Gröbner bases was developed in the second half of the 20th century many works on computational methods in algebra were published well before the introduction of the modern algebraic language Since then new algorithms have been developed and the theory itself has greatly expanded In comparison diagrammatic methods in representation theory are relatively new with the quiver varieties only being introduced with big impact in the 1990s Divided into two parts the book first discusses the theory of Gröbner bases in their commutative and noncommutative contexts with a focus on algorithmic aspects and applications of Gröbner bases to analysis on systems of partial differential equations effective analysis on rings of differential operators and homological algebra It then introduces representations of quivers quiver varieties and their applications to the moduli spaces of meromorphic connections on the complex projective line While no particular reader background is assumed the book is intended for graduate students in mathematics

Nonassociative Mathematics and its Applications Petr Vojtěchovský, Murray R. Bremner, J. Scott Carter, Anthony B. Evans, John Huerta, Michael K. Kinyon, G. Eric

Moorhouse, Jonathan D. H. Smith, 2019-01-14 Nonassociative mathematics is a broad research area that studies mathematical structures violating the associative law $x(yz) \neq (xy)z$ The topics covered by nonassociative mathematics include quasigroups loops

Latin squares Lie algebras Jordan algebras octonions racks quandles and their applications This volume contains the proceedings of the Fourth Mile High Conference on Nonassociative Mathematics held from July 29 August 5 2017 at the University of Denver Denver Colorado Included are research papers covering active areas of investigation survey papers covering Leibniz algebras self distributive structures and rack homology and a sampling of applications ranging from Yang Mills theory to the Yang Baxter equation and Laver tables An important aspect of nonassociative mathematics is the wide range of methods employed from purely algebraic to geometric topological and computational including automated deduction all of which play an important role in this book *Maple in Mathematics Education and Research* Jürgen Gerhard,Ilias Kotsireas,2020-02-27 This book constitutes the refereed proceedings of the third Maple Conference MC 2019 held in Waterloo Ontario Canada in October 2019 The 21 revised full papers and 9 short papers were carefully reviewed and selected out of 37 submissions one invited paper is also presented in the volume The papers included in this book cover topics in education algorithms and applications of the mathematical software Maple *Leavitt Path Algebras and Classical K-Theory* A. A. Ambily,Roozbeh Hazrat,B. Sury,2020-01-17 The book offers a comprehensive introduction to Leavitt path algebras LPAs and graph C algebras Highlighting their significant connection with classical K theory which plays an important role in mathematics and its related emerging fields this book allows readers from diverse mathematical backgrounds to understand and appreciate these structures The articles on LPAs are mostly of an expository nature and the ones dealing with K theory provide new proofs and are accessible to interested students and beginners of the field It is a useful resource for graduate students and researchers working in this field and related areas such as C algebras and symbolic dynamics **Bimonoids for Hyperplane Arrangements** Marcelo Aguiar,Swapneel Mahajan,2020-03-19 The goal of this monograph is to develop Hopf theory in a new setting which features centrally a real hyperplane arrangement The new theory is parallel to the classical theory of connected Hopf algebras and relates to it when specialized to the braid arrangement Joyal s theory of combinatorial species ideas from Tits theory of buildings and Rota s work on incidence algebras inspire and find a common expression in this theory The authors introduce notions of monoid comonoid bimonoid and Lie monoid relative to a fixed hyperplane arrangement They also construct universal bimonoids by using generalizations of the classical notions of shuffle and quasishuffle and establish the Borel Hopf Poincar Birkhoff Witt and Cartier Milnor Moore theorems in this setting This monograph opens a vast new area of research It will be of interest to students and researchers working in the areas of hyperplane arrangements semigroup theory Hopf algebras algebraic Lie theory operads and category theory Coxeter Bialgebras Marcelo Aguiar,Swapneel Mahajan,2022-11-17 The goal of this monograph is to develop Hopf theory in the setting of a real reflection arrangement The central notion is that of a Coxeter bialgebra which generalizes the classical notion of a connected graded Hopf algebra The authors also introduce the more structured notion of a Coxeter bimonoid and connect the two notions via a family of functors called Fock functors These generalize similar

functors connecting Hopf monoids in the category of Joyal species and connected graded Hopf algebras This monograph opens a new chapter in Coxeter theory as well as in Hopf theory connecting the two It also relates fruitfully to many other areas of mathematics such as discrete geometry semigroup theory associative algebras algebraic Lie theory operads and category theory It is carefully written with effective use of tables diagrams pictures and summaries It will be of interest to students and researchers alike **CMUC** ,2016 *Mathematical Reviews* ,2004
