comes in many forms and in synthesis it can be a failure that results in their ultimate successful solutions This long awaited sequel to Dead Ends and Detours retains the proven concept while featuring over 20 new case studies of failed strategies and their successful solutions in natural product total synthesis Additionally computational models are used to discuss the problem in much more detail and to provide readers with additional information not found in the primary literature The topics range from classic synthetic reactions e g Diels Alder reaction metal mediated coupling reactions metathesis and asymmetric catalysis to the importance of protecting and activating groups This book will benefit not only graduate students in organic chemistry but also advanced researchers as they gain knowledge derived from the step by step analysis of mistakes made in the past and thus be able to improve their own chemical reaction planning With its coverage of the most commonly applied reaction types the book perfectly complements its predecessor which focuses on general aspects such as reactivity and selectivity

Separation of Enantiomers Matthew H. Todd, 2014-05-06 In one handy volume this handbook summarizes the most common synthetic methods for the separation of racemic mixtures allowing an easy comparison of the different strategies described in the literature Alongside classical methods the authors also consider kinetic resolutions dynamic kinetic resolutions divergent reactions of a racemic mixture and a number of neglected cases not covered elsewhere such as the use of circularly polarized light polymerizations ripening processes dynamic combinatorial chemistry and several thermodynamic processes The result is a thorough introduction to the field plus a long needed up to date overview of the chemical biological and physical methods and their applications Newcomers to the field students as well as experienced synthetic chemists will benefit from the highly didactic presentation Every method is presented in detail from relatively simple separation problems to advanced complex resolution methods
