

INTRODUCTION

Hardware components of an Embedded System

Interrupt controller: It is an interrupt handling mechanism which must exist in embedded system to handle interrupts from various processes and handling multiple interrupts simultaneously.

Timers: Timer circuit is suitably configured as system clock or RTC (Real time clock). To schedule various tasks and for real time programming an RTC, or system clock is needed

Program & data memory: In embedded system, secondary memory like disk is avoided. Most of the embedded processors have internal memory such as ROM, RAM, flash/EEPROM, EPROM/PROM for storing program and data.

Formal Techniques in Real-Time and Fault-Tolerant Systems Werner Damm, Ernst-Rüdiger Olderog, 2002-08-28

This volume contains the proceedings of FTRTFT 2002 the International Symposium on Formal Techniques in Real Time and Fault Tolerant Systems held at the University of Oldenburg Germany 9-12 September 2002. This symposium was the seventh in a series of FTRTFT symposia devoted to problems and solutions in safe system design. The previous symposia took place in Warwick 1990, Nijmegen 1992, Lubbeck 1994, Uppsala 1996, Lyngby 1998, and Pune 2000. Proceedings of these symposia were published as volumes 331, 571, 863, 1135, 1486, and 1926 in the LNCS series by Springer Verlag. This year the symposium was co-sponsored by IFIP Working Group 2.2 on Formal Description of Programming Concepts. The symposium presented advances in the development and use of formal techniques in the design of real time hybrid fault tolerant embedded systems covering all stages from requirements analysis to hardware and/or software implementation. Particular emphasis was placed on UML based development of real time systems. Through invited presentations links between the dependable systems and formal methods research communities were strengthened. With the increasing use of such formal techniques in industrial settings the conference aimed at stimulating cross fertilization between challenges in industrial usages of formal methods and advanced research. In response to the call for papers 39 submissions were received. Each submission was reviewed by four program committee members assisted by additional referees. At the end of the reviewing process the program committee accepted 17 papers for presentation at the symposium.

Interrupt Handling Schemes in Operating Systems

Pedro Mejia-Alvarez, Luis Eduardo Leyva-del-Foyo, Arnaldo Diaz-Ramirez, 2018-08-10 In this book the interrupt handling models used by several operating systems are introduced and compared. We begin with an analysis of the classical interrupt management model used by Unix followed by the schemes used by modern networked environments. We highlight the key challenges of each of these models and how these have been solved by modern operating systems and the research community. Then we analyze the architectures used for general purpose and embedded real time operating systems.
