An Introduction To Efficiency And Productivity Analysis:

An Introduction to Efficiency and Productivity Analysis Timothy J. Coelli, Dodla Sai Prasada Rao, George Edward Battese, 2012-12-06 An Introduction to Efficiency and Productivity Analysis is designed as a primer for anyone seeking an authoritative introduction to efficiency and productivity analysis. It is a systematic treatment of four relatively new methodologies in Efficiency Production Analysis: a Least Squares Econometric Production Models, b Total Factor Productivity TFP Indices, c Data Envelopment Analysis DEA, and d Stochastic Frontiers. Each method is discussed thoroughly. First, the basic elements of each method are discussed using models to illustrate the method's fundamentals, and second, the discussion is expanded to treat the extensions and varieties of each method's uses. Finally, one or more case studies are provided as a full illustration of how each methodology can be used. In addition, all four methodologies will be linked in the book's presentation by examining the advantages and disadvantages of each method and the problems to which each method can be most suitably applied. The book offers the first unified text presentation of methods that will be of use to students, researchers, and practitioners who work in the growing area of Efficiency Productivity Analysis. The book also provides detailed advice on computer programs which can be used to calculate the various measures. This involves a number of presentations of computer instructions and output listings for the SHAZAM, TFPIP, DEAP, and FRONTIER computer programs.

An Introduction to Efficiency and Productivity Analysis Timothy J. Coelli, Dodla Sai Prasada Rao, George Edward Battese, 1997-11-30 *An Introduction to Efficiency and Productivity Analysis* Timothy J. Coelli, Dodla Sai Prasada Rao, Christopher J. O'Donnell, George Edward Battese, 2005-12-06 The second edition of this book has been written for the same audience as the first edition. It is designed to be a first port of call for people wishing to study efficiency and productivity analysis. The book provides an accessible introduction to the four principal methods involved: econometric estimation of average response models, index numbers, data envelopment analysis (DEA), and stochastic frontier analysis (SFA). For each method, we provide a detailed introduction to the basic concepts, give some simple numerical examples, discuss some of the more important extensions to the basic methods, and provide references for further reading. In addition, we provide a number of detailed empirical applications using real world data. The book can be used as a textbook or as a reference text. As a textbook, it probably contains too much material to cover in a single semester, so most instructors will want to design a course around a subset of chapters. For example, Chapter 2 is devoted to a review of production economics and could probably be skipped in a course for graduate economics majors. However, it should prove useful to undergraduate students and those doing a major in another field such as business management or health studies.

Health Systems Performance Assessment Christopher J. L. Murray, David B. Evans, 2003-11-06 The World Health Report 2000 has generated considerable media attention controversy in some countries and debate in academic journals This volume brings together in one place the substance of many of these key debates and reports methodological advances and new empiricism reflecting the evolution of the WHO approach since the year 2000 Specifically the volume presents many differing regional and technical perspectives on key issues major new methodological developments and a quantum increase in the empirical basis for cross country performance assessment It also gives the full report of the Scientific Peer Review Group's exhaustive assessment of these new approaches

Advanced Mathematical Methods for Economic Efficiency Analysis Pedro Macedo, Victor Moutinho, Mara Madaleno, 2023-06-21 Economic efficiency analysis has received considerable worldwide attention in the last few decades with Stochastic Frontier Analysis SFA and Data Envelopment Analysis DEA establishing themselves as the two dominant approaches in the literature This book by combining cutting edge theoretical research on DEA and SFA with attractive real world applications offers a valuable asset for professors students researchers and professionals working in all branches of economic efficiency analysis as well as those concerned with the corresponding economic policies The book is divided into three parts the first of which is devoted to basic concepts making the content self contained The second is devoted to DEA and the third to SFA The topics covered in Part 2 range from stochastic DEA to multidirectional dynamic inefficiency analysis including directional distance functions the elimination and choice translating algorithm benefit of the doubt composite indicators and internal benchmarking for efficiency evaluations Part 3 also includes exciting and cutting edge theoretical research on e.g. robustness nonparametric stochastic frontier models hierarchical panel data models and estimation methods like corrected ordinary least squares and

maximum entropy Efficiency of Health System Units in Africa Kirigia, Joses Muthuri, 2015-03-16 Despite sending huge sums of money on health every year the African region's burden of disease is persistently high. Most of the countries in the region are lagging behind in achieving the health-related United Nations Millennium Development Goals. The African region's dismal health situation has largely been blamed on weakness pertaining to such factors as health leadership and governance, service delivery, health workforce, medicines, vaccines, and health technologies, health information, and health system financing that have undermined the capacity of health systems of countries in the region to improve population health without wastage of resources. Institutionalising health system efficiency monitoring as a basis for the design and implementation of appropriate policy interventions has been proposed as an effective way of curbing wastage of health system inputs.

Efficiency of Health System Units in Africa: A Data Envelopment Analysis is the first book of its kind on application of the data envelopment analysis technique to examine the efficiency of health system decision-making units in Africa. The book interlaces lecture notes with research articles and case studies to equip students and practitioners of economics, operations research, management science, and public health with knowledge and skills for undertaking technical efficiency, cost efficiency, and total factor productivity analyses.
