An Introduction To Marine Biogeochemistry:

Introduction to Marine Biogeochemistry Susan M. Libes, 2009 *An Introduction to Marine Biogeochemistry* focuses on the ocean's role in the biogeochemical cycling of selected elements and the impact of humans on the cycling of these elements. Among the topics covered are the chemical composition of seawater from the perspectives of elemental speciation and the impacts of solutes on water's physical behavior, biogeochemical phenomena which control accumulation and preservation of marine sediments, marine chemistry of radioactive and stable isotopes and seawater pollution. The book contains many examples as well as steady state models to aid readers in understanding this growing and complex science. The focus of *Introduction to Marine Biogeochemistry* is the concept of the ocean as a system linking land and atmospheric processes. The text integrates the most current research allowing students to learn concepts in context. Includes detailed coverage of computational aspects. Offers an online companion site including a full study guide available for students. **An**

Baretta-Bekker, Egbert K. Duursma, Bouwe R. Kuipers, 2012-12-06 Marine science today is an area of rapid expansion. Scientific activity is increasing and a growing number of scientists are involved in one or more of its disciplines. For a thorough understanding of the marine environment for its exploration, exploitation, and management, background knowledge of more than one discipline is required. A clear need therefore exists for a concise multidisciplinary oceanographic encyclopedia. The initiative for this book was taken by the Netherlands Institute of Sea Research NIOZ Texel, a multidisciplinary institute founded in 1876. The second edition of this Encyclopedia contains some 1980 entries, 210 of which in biochemistry, 330 in biophysics, 350 in geology, and 970 in biology, while the remaining 120 are general terms, with 60 on oceanographic expeditions. Concepts, terminology, and methods of the various disciplines are briefly explained, and especially in the description of marine processes, the book tries to be more than a glossary or a dictionary. It attempts to provide a succinct overview of the major topics in marine science. Students, teachers, and scientists as well as interested laymen may use it to find an explanation of oceanographic terms outside their own fields. The manuscript of the first edition was read by

a variety of potential users whose comments have been used to improve and clarify the descriptions The second edition has benefited from the comments by several reviewers

Marine Pollution Tobias N. Hofer, 2008 Marine pollution is the harmful effect caused by the entry into the ocean of chemicals or particles An associated problem is that many potentially toxic chemicals adhere to tiny particles which are then taken up by plankton and benthos animals most of which are either deposit or filter feeders concentrating upward within ocean food chains Also because most animal feeds contain high fish meal and fish oil content toxins can be found a few weeks later in commonly consumed food items derived from livestock and animal husbandry such as meat eggs milk butter and margarine One common path of entry by contaminants to the sea are rivers Many particles combine chemically in a manner highly depletive of oxygen causing estuaries to become anoxic This book presents the latest research in the field from around the world

Marine Ecology Michel J. Kaiser, Simon Jennings, David Thomas, 2020 There has never been a more important time to understand our marine environment Oceans influence our climate and provide a valuable source of food to billions of people They are vital to our very existence and they are under threat Clearly written and beautifully illustrated *Marine Ecology Processes Systems and Impacts* addresses the fundamental global processes of primary and microbial production that characterize marine systems before going on to detail the diverse systems we see around the world from coral reefs to polar regions from the shores to the deep sea The third section of the book *Impacts* tackles some of the most pressing environmental issues relevant to marine ecology including climate change conservation pollution disturbance the impact of fisheries and aquaculture New to this edition A new chapter on Climate Change equips you to think more deeply about climate related issues by explaining the mechanisms through which oceans respond to the altering climate A new chapter on Sea and Society delves into the economic and sociological relationship between human beings and the ocean helping you to fully understand the value of marine ecosystems to mankind and how to manage this relationship responsibly A comprehensive update of the Microbial Production chapter has reorganised and refreshed the scientific material presented to give a thorough grounding in the chemical principles that inform key microbial processes in marine ecology Book jacket
