SPARK-PLUG FOULING

Spark-plug fouling is more likely to occur when operating the watercraft in an area where there are no wake zones. When continuous spark-plug fouling is encountered, perform the following tests:

1. Check that the oil-injection pump alignment marks are properly aligned.
2. The idle RPM screw should be set between 1500 and 1800 RPM (with the watercraft in the water).
3. Check that the low- and high-speed fuel screws are adjusted properly for your area.

DAMAGED REED VALVE SYMPTOMS

We have had several calls wondering what types of symptoms a damaged reed valve might cause. A damaged reed valve may cause hard starting, rough idling, running on one cylinder, or forcing of the fuel/air mixture back up through the carburetor venturi either while the watercraft is idling or when attempting to start.
