

JPAD (Java API for Aircraft Designers)

JPAD is an application programming interface (API) able to support civil transport aircraft designers to accomplish multi-disciplinary simulation-based analysis and optimization workflows.

The API is a Java software library containing classes and utility functions that can be used to build software systems running MCAD procedures.

JPAD comes in different interdependent software modules providing modeling, simulation, and analysis features.

The article presents an application example that considers the Airbus A320-300 as a reference aircraft and includes complete take-off and landing performance studies.

Typical transport aircraft mission breakdown

The API provides a simulation-based aircraft performance module whose implementation details are introduced by this article.

This work focuses on take-off and landing simulation models, including certification noise trajectories

Take-off and landing trajectories & noise certification measurement points

Horizontal forces during take-off simulations

Aircraft Performance And Design Solution Manual:

Aircraft Performance Mohammad H. Sadraey, 2023-07-14 Aircraft Performance An Engineering Approach Second Edition introduces flight performance analysis techniques of fixed wing air vehicles particularly heavier than aircraft It covers maximum speed absolute ceiling rate of climb range endurance turn performance and takeoff run Enabling the reader to analyze the performance and flight capabilities of an aircraft by utilizing only the aircraft weight data geometry and engine characteristics this book covers the flight performance analysis for both propeller driven and jet aircraft The second edition features new content on vertical takeoff and landing UAV launch UAV recovery use of rocket engine as the main engine range for electric aircraft electric engine endurance for electric aircraft gliding flight pull up and climb turn In addition this book includes end of chapter problems MATLAB code and examples and case studies to enhance and reinforce student understanding This book is intended for senior undergraduate aerospace students taking courses in Aircraft Performance Flight Dynamics and Flight Mechanics Instructors will be able to utilize an updated Solutions Manual and Figure Slides for their course

Theory and Practice of Aircraft Performance Ajoy Kumar Kundu, Mark A. Price, David Riordan, Peter Belobaba, Jonathan Cooper, Allan Seabridge, 2016-09-02 Textbook introducing the fundamentals of aircraft performance using industry standards and examples bridging the gap between academia and industry Provides an extensive and detailed treatment of all segments of mission profile and overall aircraft performance Considers operating costs safety environmental and related systems issues Includes worked examples relating to current aircraft Learjet 45 Tucano Turboprop Trainer Advanced Jet Trainer and Airbus A320 types of aircraft Suitable as a textbook for aircraft performance courses

Training Design in Aviation Norman MacLeod, 2017-03-02 Well structured training based on sound theoretical principles can transform the system in which high performance is essential and in turn the organisation Yet the strategic role of cost effective training provision is often less well understood than it might be in all branches of aviation whether civil or regional general business or military This book analyzes the cycle of training design from the identification of requirement through to measurement of effectiveness Key issues in training design and management are illustrated with examples and learning is consolidated through case studies The book provides advice tools procedures and examples of best practice both recent and well established to assist aviation training personnel who aim to guarantee cost effective training The approach is highly practical but does not avoid covering the theory when needed An informative guide to the process of training analysis and course design the book examines each stage of the training design cycle in some depth In addition it looks at the application of quality management and of project management to training

design Each chapter contains advice and techniques as well as examples drawn from the author's wealth of experience of training in aviation *Scientific and Technical Books and Serials in Print*, 1989 *Computational Fluid Dynamics for the 21st Century* Mohamed Hafez, Koji Morinishi, Jacques Periaux, 2013-03-09 The goal of this book is to present the new trend of Computational Fluid Dynamics CFD for the 21st Century It consists of papers presented at a symposium honoring Prof Nobuyuki Satofuka on the occasion of his 60th birthday The symposium entitled Computational Fluid Dynamics for the 21st Century was held at Kyoto Institute of Technology KIT in Kyoto Japan on July 15-17 2000 The symposium was hosted by KIT as a memorial event celebrating the 100 year anniversary of this establishment The invited speakers were from Japan as well as from the international community in Asia Europe and North America It is a great pleasure to dedicate this book to Prof Satofuka in appreciation of his contributions to this field During the last 30 years Prof Satofuka made many important contributions to CFD advancing the numerics and our understanding of flow physics in different regimes The details of his contributions are discussed in the first chapter The book contains chapters covering related topics with emphasis on new promising directions for the 21st Century The chapters of the book reflect the 10 sessions of the symposium on both the numerics and the applications including grid generation and adaptation new numerical schemes optimization techniques and parallel computations as well as applications to multiscale and multiphysics problems design and flow control and new topics beyond aeronautics In the following the chapters of the book are introduced **The Aeronautical Journal**, 1999

A Cascade Optimization Strategy for Solution of Difficult Multidisciplinary Design Problems, 1996 A research project to comparatively evaluate 10 nonlinear optimization algorithms was recently completed A conclusion was that no single optimizer could successfully solve all 40 problems in the test bed even though most optimizers successfully solved at least one third of the problems We realized that improved search directions and step lengths available in the 10 optimizers compared were not likely to alleviate the convergence difficulties For the solution of those difficult problems we have devised an alternative approach called cascade optimization strategy The cascade strategy uses several optimizers one followed by another in a specified sequence to solve a problem A pseudorandom scheme perturbs design variables between the optimizers The cascade strategy has been tested successfully in the design of supersonic and subsonic aircraft configurations and air breathing engines for high speed civil transport applications These problems could not be successfully solved by an individual optimizer The cascade optimization strategy however generated feasible optimum solutions for both aircraft and engine problems This paper presents the cascade strategy and solutions to a number of these problems
