Algorithms To Live By Mobi:

Algorithms to Live By Brian Christian, Tom Griffiths, 2016-04-19 An exploration of how computer algorithms can be applied to our everyday lives to solve common decision making problems and illuminate the workings of the human mind What should we do or leave undone in a day or a lifetime How much messiness should we accept What balance of the new and familiar is the most fulfilling These may seem like uniquely human quandaries but they are not Computers like us confront limited space and time so computer scientists have been grappling with similar problems for decades And the solutions they've found have much to teach us In a dazzlingly interdisciplinary work Brian Christian and Tom Griffiths show how algorithms developed for computers also untangle very human questions They explain how to have better hunches and when to leave things to chance how to deal with overwhelming choices and how best to connect with others From finding a spouse to finding a parking spot from organizing one's inbox to peering into the future Algorithms to Live By transforms the wisdom of computer science into strategies for human living

Christian and Tom Griffiths is an immersive look at the history and development of several algorithms used to solve computer science problems. It also considers potential applications of algorithms in human life including memory storage and network communication. One such computer science problem is the optimal stopping problem, the mathematical puzzle for determining how long to review options and gather data before settling on the best choice available. The algorithm based on statistical analysis shows that there is an optimal place or time to stop researching options or solutions to a problem and instead commit to the next option that's just as good as those already considered. Similarly, the mathematical way to decide whether to try something new or stick with the familiar choice is expressed by the Gittins Index score of any given alternative. It values a complete unknown more highly than a known one. This is a key takeaway and analysis of the book and NOT the original book. Jeder von uns trifft unzählige Entscheidungen am Tag. Entscheidungen, die uns viel Zeit kosten und nicht immer zu den besten Ergebnissen führen. Das lässt sich ändern, wenn wir die Vorteile der Algorithmen stärker für uns nutzen würden. Davon sind der Wissenschaftsautor Brian Christian und der Psychologe Tom Griffiths überzeugt. In ihrem Buch zeigen sie auf, wie uns Algorithmen helfen können, die bestmögliche Lösung für ganz alltägliche Probleme zu finden, von der Suche nach einem Parkplatz bis zur Auswahl des richtigen Restaurants oder Partners. Algorithmen für den Alltag betrachtet die Erkenntnisse der Informatik in nützliche und alltagstaugliche Strategien und zeigt uns, wie wir mit ihrer Hilfe produktiver organisierter und wesentlich glücklicher werden.
