ABSTRACT

Non-military defense is a defense to deal with non-military threats that can endanger or have implications for national defense. Non-military threats have ideological, political, economic, socio-cultural, technological, public safety, and legislation dimensions. In the general policy of national defense for the years 2020-2024, it is stated that in the policy of implementing non-military defense, it is directed to deal with the dimensions and types of threats by determining the ministry/institution as the main element. Bank Indonesia realizes that the payment system needs to adapt to the presence of digital technology. To that end, BI has issued a blueprint for the Indonesia Payment System (SPT) 2025, one of whose vision is to support the digitization of banking as the main institution in the digital-financial economy, both through open-banking and the use of digital technology and data in the financial business. The research objective is to provide government input on the role of Bank Indonesia in the Electronification of the Digital Economy as a Form of Non-Military Defense. Research with qualitative methods is aimed at understanding social phenomena from the perspective of participants. The results achieved are in accordance with the Role theory that Bank Indonesia encourages banking digitalization, supports the integration of the national digital economy, ensures interlink fintech and banking, to ensure consumer protection and national interests are maintained.

Introduction

Non-military defense, also known as non-military defense, is a national defense force built within the framework of national development to achieve national prosperity and prepared to face non-military threats. The non-military defense layer is structured in security functions for public safety which includes handling natural disasters and other humanitarian operations, socio-cultural, economic, defense psychology, which in essence relates to state defense awareness thinking, and technology development (Ambodo 2022).

The main point of the general policy on national defense for 2020-2024 states that the policy for implementing non-military defense is directed at dealing with the dimensions and types of threats by determining the ministries/agencies as the main elements and ministries/agencies and local governments as supporters of the implementation of non-military defense (Arifin 2022). Bank Indonesia (BI) has launched the National Non-Cash Movement (GNNT) on August 14, 2014 which aims to create a safe, efficient and smooth

Being Digital Electronification:

Fluid Power Pumps and the Electrification Samuel Kärnell, 2020-05-25 More and more vehicles are being electrified Mobile working machines and heavy trucks are not excluded and these machines are often hydraulically intense Electrification entails new requirements for the hydraulic system and its components and these requirements must be taken into consideration Hydraulic systems have looked similar for a long time but now there is an opportunity to advance Many things change when a diesel engine is replaced with an electric motor For example variable speed control becomes more relevant electric regeneration becomes possible and the use of multiple prime movers becomes an attractive alternative The noise from the hydraulic system will also be more noticeable when the diesel engine is gone Furthermore the introduction of batteries to the system makes the energy more valuable since batteries are heavy and costly compared to a diesel tank Therefore it is commercially viable to invest in the hydraulic system This thesis revolves around the heart of the hydraulic system that also is the root of all evil That is the pump Traditionally a pump has had either a fixed displacement or a continuously variable displacement Here the focus is on something in between namely a pump with discrete displacement The idea of discrete displacement is far from unique but has not been investigated in detail in combination with variable speed before In this thesis a novel design for a quiet pump with discrete displacement is presented and analysed The results show that discrete displacement is relevant from an energy perspective for machines working extensively at high pressure levels and with low flow rates and that a few discrete values are enough to make a significant difference However for other cycles the possible energy gains are very limited but the discrete displacement can be a valuable feature if downsizing the electric machine is of interest

Advancements in Fluid Power Technology: Sustainability, Electrification, and Digitalization Liselott Ericson, Petter Krus, 2025-08-31 This open access book contains contributions from the Global Fluid Power Society GFPS PhD Symposium 2024 It reflects the collaborative efforts of researchers who are dedicated to pushing the boundaries of fluid power research The GFPS PhD symposium established in 2016 as a biannual event is a platform for exchanging ideas and insights related to fluid power technology among young researchers It serves as a focal point for the exploration of various technical topics related to fluid power including components systems and applications Fluid power technology undergoes a rapid transformation towards electrification and digitalization requiring innovation and new technical solutions across the industry in response to societal requirements on different aspects of sustainability The book covers a range of topics that align with the symposium's theme Advancements in Fluid Power Technology Sustainability Electrification and Digitalization The content encompasses a wide spectrum of subjects including fluid power applications control and automation energy efficiency electrification and environmental sustainability The book can be a valuable reference for researchers and professionals interested in fluid power research and allied fields
