Michael Kelley, 2013-11-07 When the numbers just don't add up Following in the footsteps of the successful The Humongous Books of Calculus Problems bestselling author Michael Kelley has taken a typical algebra workbook and made notes in the margins adding missing steps and simplifying concepts and solutions Students will learn how to interpret and solve 1000 problems as they are typically presented in algebra courses and become prepared to solve those problems that were never discussed in class but always seem to find their way onto exams Annotations throughout the text clarify each problem and fill in missing steps needed to reach the solution making this book like no other algebra workbook on the market *Computational Problems in Abstract Algebra* John Leech, 2014-05-17 *Computational Problems in Abstract Algebra* provides information pertinent to the application of computers to abstract algebra This book discusses combinatorial problems dealing with things like generation of permutations projective planes orthogonal latin squares graphs difference sets block designs and Hadamard matrices Comprised of 35 chapters this book begins with an overview of the methods utilized in and results obtained by programs for the investigation of groups This text then examines the method for establishing the order of a finite group defined by a set of relations satisfied by its generators Other chapters describe the modification of the Todd Coxeter coset enumeration process This book discusses as well the difficulties that arise with multiplication and inverting programs and of some ways to avoid or overcome them The final chapter deals with the computational problems related to invariant factors in linear algebra Mathematicians as well as students of algebra will find this book useful Math Tools, Grades 3-12 Harvey F. nineteen sixties has also been referred to as symbolic and algebraic computation or formula manipulation Algebraic algorithms have been receiving increasing interest as a result of the recognition of the central role of algorithms in computer science They can be easily specified in a formal and rigorous way and provide solutions to problems known and studied for a long time Whereas traditional algebra is concerned with constructive methods computer algebra is furthermore interested in efficiency in implementation and in hardware and software aspects of the algorithms It develops that in deciding effectiveness and determining efficiency of algebraic methods many other tools recursion theory logic analysis and combinatorics for example are necessary In the beginning of the use of computers for symbolic algebra it soon became apparent that the straightforward textbook methods were often very inefficient Instead of turning to numerical approximation methods computer algebra studies systematically the sources of the inefficiency and searches for alternative algebraic methods to improve or even replace the algorithms

Kaltofen, Volker Weispfenning, 2012-12-06 Two ideas lie gleaming on the jeweler's velvet The first is the calculus the second the algorithm The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible but it has been the algorithm that has made possible the modern world David Berlinski The Advent of the Algorithm First there was the concept of integers then there were symbols for integers I II III 1 1 1 1 fttt what might be called a sticks and stones representation I II III IV V Roman numerals 1 2 3 4 5 Arabic numerals etc Then there were other concepts with symbols for them and algorithms sometimes for manipulating the new symbols Then came collections of mathematical knowledge tables of mathematical computations theorems of general results Soon after algorithms came devices that provided assistance for carrying out computations Then mathematical knowledge was organized and structured into several related concepts and symbols logic algebra analysis topology algebraic geometry number theory combinatorics etc This organization and abstraction lead to new algorithms and new fields like universal algebra But always our symbol systems reflected and influenced our thinking our concepts and our algorithms
