The book consists of 16 chapters which are divided into two parts. The first part contains nine chapters which describe tension including elastic stress-strain relation, relevant theory of plasticity, and strengthening methods; compression; hardness; bending; torsion; pure shear; impact loading; creep; and stress rupture; fatigue; and fracture. The second part is composed of seven chapters and covers fundamentals of mechanical working: forging; rolling; extrusion; drawing of flat strip, round bar, and tube; deep drawing; and high energy rate forming. The book comprises an exhaustive description of mechanical properties evaluated by testing of metals and metal working in sufficient depth and with reasonably wide coverage. The book is written in an easy-to-understand manner and includes many solved problems. More than 150 numerical problems and many multiple-choice questions, as exercises, along with their answers, have

also been provided The mathematical analyses are well elaborated without skipping any intermediate steps Slab method of analysis or free body equilibrium approach is used for the analytical treatment of mechanical working processes For hot working processes different frictional conditions sliding sticking and mixed sticking sliding have been considered to estimate the deformation loads In addition to the slab method of analysis this book also contains slip line field theory its application to the static system and the steady state motion Further this book includes upper bound theorem and upper bound solutions for indentation compression extrusion and strip drawing The book can be used to teach graduate and undergraduate courses offered to students of mechanical aerospace production manufacturing and metallurgical engineering disciplines The book can also be used for metallurgists and practicing engineers in industry and development courses in the metallurgy and metallic manufacturing industries
