Brownian Motion and Stochastic Flow Systems J. Michael Harrison, 1985 *Asymptotic Methods in Probability and Statistics* B. Szyszkowicz, 1998-10-29 One of the aims of the conference on which this book is based was to provide a platform for the exchange of recent findings and new ideas inspired by the so called Hungarian construction and other approximate methodologies This volume of 55 papers is dedicated to Mikl s Cs rg a co founder of the Hungarian construction school by the invited speakers and contributors to ICAMPS 97 This excellent treatise reflects the many developments in this field while pointing to new directions to be explored An unequalled contribution to research in probability and statistics **Stochastic Flows in the Brownian Web and Net** Emmanuel Schertzer , Rongfeng Sun, Jan M. Swart, 2014-01-08 It is known that certain one dimensional nearest neighbor random walks in i i d random space time environments have diffusive scaling limits Here in the continuum limit the random environment is represented by a stochastic flow of kernels which is a collection of random kernels that can be loosely interpreted as the transition probabilities of a Markov process in a random environment The theory of stochastic flows of kernels was first developed by Le Jan and Raimond who showed that each such flow is characterized by its point motions The authors work focuses on a class of stochastic flows of kernels with Brownian point motions which after their inventors will be called Howitt Warren flows The authors main result gives a graphical construction of general Howitt Warren flows where the underlying random environment takes on the form of a suitably marked Brownian web This extends earlier work of Howitt and Warren who showed that a special case the so called erosion flow can be constructed from two coupled sticky Brownian webs The authors construction for general Howitt Warren flows is based on a Poisson marking procedure developed by Newman Ravishankar and Schertzer for the Brownian web Alternatively the authors show that a special subclass of the Howitt Warren flows can be constructed as random flows of mass in a Brownian net introduced by Sun and Swart Using these constructions the authors prove some new results for the Howitt Warren flows

Handbook of Healthcare Analytics Tinglong Dai, Sridhar Tayur, 2018-08-10 How can analytics scholars and healthcare professionals access the most exciting and important healthcare topics and tools for the 21st century Editors Tinglong Dai and Sridhar Tayur aided by a team of internationally acclaimed experts have curated this timely volume to help newcomers and seasoned researchers alike to rapidly comprehend a diverse set of thrusts and tools in this rapidly growing cross disciplinary field The Handbook covers a wide range of macro meso and micro level thrusts such as market design competing interests global health personalized medicine residential care and concierge medicine among others and structures what has been a highly fragmented research area into a coherent scientific discipline The handbook also provides an easy to comprehend introduction to five essential research tools Markov decision process game theory and information economics queueing games econometric methods and data science by illustrating their uses and applicability on examples from diverse healthcare settings thus connecting tools with thrusts The primary audience of the Handbook includes analytics scholars

interested in healthcare and healthcare practitioners interested in analytics This Handbook Instills analytics scholars with a way of thinking that incorporates behavioral incentive and policy considerations in various healthcare settings This change in perspective a shift in gaze away from narrow local and one off operational improvement efforts that do not replicate scale or remain sustainable can lead to new knowledge and innovative solutions that healthcare has been seeking so desperately Facilitates collaboration between healthcare experts and analytics scholar to frame and tackle their pressing concerns through appropriate modern mathematical tools designed for this very purpose The handbook is designed to be accessible to the independent reader and it may be used in a variety of settings from a short lecture series on specific topics to a semester long course

Directed Polymers in Random Environments Francis Comets,2017-01-26 Analyzing the phase transition from diffusive to localized behavior in a model of directed polymers in a random environment this volume places particular emphasis on the localization phenomenon The main question is What does the path of a random walk look like if rewards and penalties are spatially randomly distributed This model which provides a simplified version of stretched elastic chains pinned by random impurities has attracted much research activity but it and its relatives still holds many secrets especially in high dimensions It has non gaussian scaling limits and it belongs to the so called KPZ universality class when the space is one dimensional Adopting a Gibbsian approach using general and powerful tools from probability theory the discrete model is studied in full generality Presenting the state of the art from different perspectives and written in the form of a first course on the subject this monograph is aimed at researchers in probability or statistical physics but is also accessible to masters and Ph D students

Empirical Model Building James R. Thompson,2009-09-25 A hands on approach to the basic principles of empirical model building Includes a series of real world statistical problems illustrating modeling skills and techniques Covers models of growth and decay systems where competition and interaction add to the complexity of the model and discusses both classical and nonclassical data analysis methods
