

The background of the slide features a complex, repeating geometric pattern. It consists of large squares, each containing a smaller square or circle. The colors are primarily orange and black, with some areas appearing as a lighter, textured orange. The pattern is symmetrical and covers the entire slide area.

A Primer On Mapping Class Groups A Primer On Mapping Class Groups:

A Primer on Mapping Class Groups Benson Farb, Dan Margalit, 2012 The study of the mapping class group $\text{Mod } S$ is a classical topic that is experiencing a renaissance It lies at the juncture of geometry topology and group theory This book explains as many important theorems examples and techniques as possible quickly and directly while at the same time giving full details and keeping the text nearly self contained The book is suitable for graduate students A Primer on Mapping Class Groups begins by explaining the main group theoretical properties of $\text{Mod } S$ from finite generation by Dehn twists and low dimensional homology to the Dehn Nielsen Baer theorem Along the way central objects and tools are introduced such as the Birman exact sequence the complex of curves the braid group the symplectic representation and the Torelli group The book then introduces Teichmüller space and its geometry and uses the action of $\text{Mod } S$ on it to prove the Nielsen Thurston classification of surface homeomorphisms Topics include the topology of the moduli space of Riemann surfaces the connection with surface bundles pseudo Anosov theory and Thurston's approach to the classification [A Primer on Mapping Class Groups](#) Benson Farb, 2012 The study of the mapping class group $\text{Mod } S$ is a classical topic that is experiencing a renaissance It lies at the juncture of geometry topology and group theory This book explains as many important theorems examples and techniques as possible quickly and directly while at the same time giving full details and keeping the text nearly self contained The book is suitable for graduate students The book begins by explaining the main group theoretical properties of $\text{Mod } S$ from finite generation by Dehn twists and low dimensional homology to the Dehn Nielsen Baer theorem Along the way central objects and tools are introduced such as the Birman exact sequence the complex of curves the braid group the symplectic representation and the Torelli group The book then introduces Teichmüller space and its geometry and uses the action of $\text{Mod } S$ on it to prove the Nielsen Thurston classification of surface homeomorphisms Topics include the topology of the moduli space of Riemann surfaces the connection with surface bundles pseudo Anosov theory and Thurston's approach to the classification Provided by publisher **Problems on Mapping Class Groups and Related Topics** Benson Farb, 2006-09-12 The appearance of mapping class groups in mathematics is ubiquitous The book presents 23 papers containing problems about mapping class groups the moduli space of Riemann surfaces Teichmüller geometry and related areas Each paper focusses completely on open problems and directions The problems range in scope from specific computations to broad programs The goal is to have a rich source of problems which have been formulated explicitly and accessibly The book is divided into four parts Part I contains problems on the combinatorial and cohomological group theoretic aspects of mapping class groups and the way in which these relate to problems in geometry and topology Part II concentrates on connections with classification problems in 3 manifold theory the theory of symplectic 4 manifolds and algebraic geometry A wide variety of problems from understanding billiard trajectories to the classification of Kleinian groups can be reduced to differential and synthetic geometry problems about moduli space Such problems and connections

are discussed in Part III Mapping class groups are related both concretely and philosophically to a number of other groups such as braid groups lattices in semisimple Lie groups and automorphism groups of free groups Part IV concentrates on problems surrounding these relationships This book should be of interest to anyone studying geometry topology algebraic geometry or infinite groups It is meant to provide inspiration for everyone from graduate students to senior researchers

Hochschild Cohomology, Modular Tensor Categories, and Mapping Class Groups I Simon Lentner, Svea Nora Mierach, Christoph Schweigert, Yorck Sommerhäuser, 2023-07-25 The book addresses a key question in topological field theory and logarithmic conformal field theory In the case where the underlying modular category is not semisimple topological field theory appears to suggest that mapping class groups do not only act on the spaces of chiral conformal blocks which arise from the homomorphism functors in the category but also act on the spaces that arise from the corresponding derived functors It is natural to ask whether this is indeed the case The book carefully approaches this question by first providing a detailed introduction to surfaces and their mapping class groups Thereafter it explains how representations of these groups are constructed in topological field theory using an approach via nets and ribbon graphs These tools are then used to show that the mapping class groups indeed act on the so called derived block spaces Toward the end the book explains the relation to Hochschild cohomology of Hopf algebras and the modular group

Office Hours with a Geometric Group Theorist Matt Clay, Dan Margalit, 2017-07-11 Geometric group theory is the study of the interplay between groups and the spaces they act on and has its roots in the works of Henri Poincaré Felix Klein J H C Whitehead and Max Dehn Office Hours with a Geometric Group Theorist brings together leading experts who provide one on one instruction on key topics in this exciting and relatively new field of mathematics It is like having office hours with your most trusted math professors An essential primer for undergraduates making the leap to graduate work the book begins with free groups actions of free groups on trees algorithmic questions about free groups the ping pong lemma and automorphisms of free groups It goes on to cover several large scale geometric invariants of groups including quasi isometry groups Dehn functions Gromov hyperbolicity and asymptotic dimension It also delves into important examples of groups such as Coxeter groups Thompson's groups right angled Artin groups lamplighter groups mapping class groups and braid groups The tone is conversational throughout and the instruction is driven by examples Accessible to students who have taken a first course in abstract algebra Office Hours with a Geometric Group Theorist also features

numerous exercises and in depth projects designed to engage readers and provide jumping off points for research projects

In the Tradition of Thurston III Ken'ichi Ohshika,Athanasios Papadopoulos,2024-03-19 William Thurston's ideas have altered the course of twentieth century mathematics and they continue to have a significant influence on succeeding generations of mathematicians The purpose of the present volume and of the other volumes in the same series is to provide a collection of articles that allows the reader to learn the important aspects of Thurston's heritage The topics covered in this volume include Kleinian groups holomorphic motions earthquakes from the Anti de Sitter point of view the Thurston and Weil Petersson metrics on Teichmüller space 3 manifolds geometric structures dynamics on surfaces homeomorphism groups of 2 manifolds and the theory of orbifolds Moduli Spaces of Riemann Surfaces Benson Farb,Richard Hain,Eduard

Looijenga,2013-08-16 Mapping class groups and moduli spaces of Riemann surfaces were the topics of the Graduate Summer School at the 2011 IAS Park City Mathematics Institute This book presents the nine different lecture series comprising the summer school covering a selection of topics of current interest The introductory courses treat mapping class groups and Teichmüller theory The more advanced courses cover intersection theory on moduli spaces the dynamics of polygonal billiards and moduli spaces the stable cohomology of mapping class groups the structure of Torelli groups and arithmetic mapping class groups The courses consist of a set of intensive short lectures offered by leaders in the field designed to introduce students to exciting current research in mathematics These lectures do not duplicate standard courses available elsewhere The book should be a valuable resource for graduate students and researchers interested in the topology geometry and dynamics of moduli spaces of Riemann surfaces and related topics Titles in this series are co published with the Institute for Advanced Study Park City Mathematics Institute Members of the Mathematical Association of America MAA and the National Council of Teachers of Mathematics NCTM receive a 20% discount from list price **Geometric Group Theory** Mladen

Bestvina,Micha Sageev,Karen Vogtmann,2014-12-24 Geometric group theory refers to the study of discrete groups using tools from topology geometry dynamics and analysis The field is evolving very rapidly and the present volume provides an introduction to and overview of various topics which have played critical roles in this evolution The book contains lecture notes from courses given at the Park City Math Institute on Geometric Group Theory The institute consists of a set of intensive short courses offered by leaders in the field designed to introduce students to exciting current research in mathematics These lectures do not duplicate standard courses available elsewhere The courses begin at an introductory level suitable for graduate students and lead up to currently active topics of research The articles in this volume include introductions to CAT 0 cube complexes and groups to modern small cancellation theory to isometry groups of general CAT 0 spaces and a discussion of nilpotent genus in the context of mapping class groups and CAT 0 groups One course surveys quasi isometric rigidity others contain an exploration of the geometry of Outer space of actions of arithmetic groups lectures on lattices and locally symmetric spaces on marked length spectra and on expander graphs Property tau and approximate
