Advances in Neurotechnology, Electronics and Informatics Ana Rita Londral, Pedro Encarnação, 2015-12-10 This book is a timely report on current neurotechnology research. It presents a snapshot of the state of the art in the field, discusses current challenges and identifies new directions. The book includes a selection of extended and revised contributions presented at the 2nd International Congress on Neurotechnology Electronics and Informatics NEUROTECHNIX 2014 held October 25-26 in Rome, Italy. The chapters are varied: some report on novel theoretical methods for studying neuronal connectivity or neural system behaviour; others report on advanced technologies developed for similar purposes, while further contributions concern new engineering methods and technological tools supporting medical diagnosis and neurorehabilitation. All in all, this book provides graduate students, researchers and practitioners dealing with different aspects of neurotechnologies with a unified view of the field, thus fostering new ideas and research collaborations among groups from different disciplines.

Neurotechnology, Electronics, and Informatics Ana Rita Londral, Pedro Encarnação, José Luis Pons Rovira, 2015-07-15 The International Congress on Neurotechnology Electronics and Informatics NEUROTECHNIX took place in Algarve, Portugal, in September of 2013. The congress provided a meeting point of academics and clinical and engineering professionals, promoting translational discussions on how research and technology can meet the needs of clinical practitioners and patients. NEUROTECHNIX emphasized research and application of neurotechnologies to various neurological disorders, including neuromuscular diseases, Parkinson's disease, developmental disorders, dementia, epilepsy, sleep disorders, Multiple Sclerosis, neuroinfections, brain tumors, stroke, traumatic brain injuries, Cerebral Palsy, spinal cord injury, and vision and hearing disorders. Authors were invited to submit innovative research work that highlighted new advancements of neurotechnology. Papers describing case studies, advanced prototypes, systems, tools and techniques, and general survey papers indicating future directions were encouraged. This book contains a limited selection of extended and revised versions of the best papers presented at the congress by regular and keynote speakers.

Trends in Neuroergonomics: A Comprehensive Overview Klaus Gramann, Stephen H. Fairclough, Thorsten O. Zander, Hasan Ayaz, 2017-07-04 This Research Topic is dedicated to Raja Parasuraman who unexpectedly passed on March 22nd 2015 Raja Parasuraman's pioneering work led the emergence of Neuroergonomics as a new scientific field He combined his research interests in the field of Neuroergonomics which he defined as the study of the human brain in relation to performance at work and everyday settings Raja Parasuraman was a pioneer a truly exceptional researcher and an extraordinary person He made significant contributions to a number of disciplines from human factors to cognitive neuroscience His advice to young researchers was to be passionate in order to develop theory and knowledge that can guide the design of technologies and environments for people His legacy the field of Neuroergonomics will live on in countless faculties and students whom he advised and inspired with unmatched humility throughout the whole of his distinguished career Raja Parasuraman was an impressive human being a very kind person and an absolutely inspiring individual who will be remembered by everyone who had the chance to meet him About this Research Topic Since the advent of neuroergonomics significant progress has been made with respect to methodology and tools for the investigation of the brain and behavior at work This is especially the case for neuroscientific methods where the availability of ambulatory hardware wearable sensors and advanced data analyses allow for imaging of brain dynamics in humans in applied environments Methods such as electroencephalography EEG functional near infrared spectroscopy fNIRS and stimulation approaches like transcranial direct current stimulation tDCS have made significant progress in both recording and altering brain activity while allowing full body movements outside laboratory environments For neuroergonomics the application of brain imaging in real world scenarios is highly relevant Traditionally brain imaging experiments in human factors research tend to avoid active behavior for fear of artifacts and a

contaminated data set that would provide limited insight into brain dynamics in real working environments To overcome these problems new analyses approaches have to be developed that identify artifacts resulting from hostile recording environments and movement related non brain activity stemming from eye head and full body movements The application of methodology from the field of Brain Computer Interfacing BCI for neuroergonomics is one approach that has significant potential to enhance ambulatory monitoring and applied testing Passive BCIs allow for assessing aspects of the user state online such that systems can automatically adapt to their user This neuroadaptive technology could lead to highly efficient working environments to auto adaptive experimental paradigms and to a continuous tracking of cognitive and affective aspects of the user state Hence deployment of portable neuroimaging technologies to real time settings could help assess cognitive and motivational states of personnel assigned to perform critical tasks This Research Topic gathers submissions that cover new approaches in neuroergonomics Different article type cover advanced neuroscience methods and neuroergonomics techniques as well as analysis approaches to investigate brain dynamics in working environments The selection of papers provides insights into new neuroergonomic research approaches that demonstrate significant advances in brain imaging technologies that become more and more mobile Moreover a strong trend for new analyses approaches and paradigms investigating real work settings can be seen Together this unique collection of latest research papers provides a comprehensive overview on the latest developments in neuroergonomics

Closed-Loop Systems for Next-Generation Neuroprostheses Timothée Levi, Paolo Bonifazi, Paolo Massobrio, Michela Chiappalone, 2018-04-26 Millions of people worldwide are affected by neurological disorders which disrupt the connections within the brain and between brain and body causing impairments of primary functions and paralysis Such a number is likely to increase in the next years and current assistive technology is yet limited A possible response to such disabilities offered by the neuroscience community is given by Brain Machine Interfaces BMIs and neuroprostheses The latter field of research is highly multidisciplinary since it involves very different and disperse scientific communities making it fundamental to create connections and to join research efforts Indeed the design and development of neuroprosthetic devices span involve different research topics such as interfacing of neural systems at different levels of architectural complexity from in vitro neuronal ensembles to human brain bio artificial interfaces for stimulation e g micro stimulation DBS Deep Brain Stimulation and recording e g EMG Electromyography EEG Electroencephalography LFP Local Field Potential innovative signal processing tools for coding and decoding of neural activity biomimetic artificial Spiking Neural Networks SNN and neural network modeling In order to develop functional communication with the nervous system and to create a new generation of neuroprostheses the study of closed loop systems is mandatory It has been widely recognized that closed loop neuroprosthetic systems achieve more favorable outcomes for users then equivalent open loop devices Improvements in task performance usability and embodiment have all been reported in systems utilizing some form of feedback The bi directional communication between living neurons and artificial devices is the main final goal of those studies However closed loop systems are still uncommon in the literature mostly due to

requirement of multidisciplinary effort Therefore through eBook on closed loop systems for next generation neuroprostheses we encourage an active discussion among neurobiologists electrophysiologists bioengineers computational neuroscientists and neuromorphic engineers This eBook aims to facilitate this process by ordering the 25 contributions of this research in which we highlighted in three different parts A Optimization of different blocks composing the closed loop system B Systems for neuromodulation based on DBS EMG and SNN and C Closed loop BMIs for rehabilitation Living Machines Tony J. Prescott, Nathan Lepora, Paul F. M. J. Verschure, 2018 Contemporary research in the field of robotics attempts to harness the versatility and sustainability of living organisms with the hope of rendering a renewable adaptable and robust class of technology that can facilitate self repairing social and moral even conscious machines This landmark volume surveys this flourishing area of research
