Thin-Walled Structures J.Y. Richard Liew,V. Thevendran,N.E. Shanmugam,1998-11-27 Thin plated structures are used extensively in building construction automobile aircraft shipbuilding and other industries because of a number of favourable factors such as high strength weight ratio development of new materials and processes and the availability of efficient analytical methods This class of structure is made by joining thin plates together at their edges and they rely for their rigidity and strength upon the tremendous stiffness and load carrying capacity of the flat plates from which they are made Many of the problems encountered in these structures arise because of the effects of local buckling The knowledge of various facets of this phenomenon has increased dramatically since the 1960s Problem areas which were hitherto either too complex for rigorous analysis or whose subtleties were not fully realized have in these years been subjected to intensive study Great advances have been made in the areas of inelastic buckling The growth in use of lightweight strong materials such as fibre reinforced plastics has also been a contributory factor towards the need for advances in the knowledge of the far post buckling range The conference is a sequel to the international conference organised by the University of Strathclyde in December 1996 and this international gathering will provide the opportunity for discussion of recent developments and trends in design of thin walled structures

Light-Weight Steel and Aluminium Structures P. Mäkeläinen,P. Hassinen,1999-06-02 ICSAS 99 The Fourth International Conference on Steel and Aluminium Structures was a sequel to ICSAS 87 held in Cardiff UK to ICSAS 91 held in Singapore and to ICSAS 95 held in Istanbul Turkey The objective of the conference was to provide a forum for the discussion of recent findings and developments in the design and construction of various types of steel and aluminium structures The conference was concerned with the analysis modelling and design of light weight or slender structures in which the primary material is structural steel stainless or aluminium The structural analysis papers presented at the conference cover both static and dynamic behaviour instability behaviour and long term behaviour under hygrothermal effects The results of the latest research and development of some new structural products were also presented at the conference A total of 76 papers and 30 posters were presented at the conference by participants from 36 countries in all 6 continents
