Kravets, Alexander A. Bolshakov, Maxim V. Shcherbakov, 2023-07-31 This book is devoted to the study of engineering and control technologies for the cyber physical systems development This book defines the approaches in the engineering leverage the exploitation of artificial intelligence and most urgent computing methods The authors study the activities allows for the developing new and perspective concepts of robotics systems combining various machine learning methods uncertainty explanation approaches computer vision and unmanned aerial systems control technologies including artificial neural networks and simulation modeling by addressing a large scale of applications The book also describes new materials engineering as well as implementation of these technologies in the different domains such as polymeric film production polymer composition and roller squeezing of leather in order to realize the novel cyber physical systems their functionalities and features The authors describe the development of method for increasing the software efficiency considering the increasing complexity of the computing systems and the importance of ensuring accuracy and velocity of modelling The book also analyses algorithms for fuzzy models and systems including the cyber physical real time systems and non stationary object with discrete time The authors highlight the problem of ensuring the quality on engineering technologies for cyber physical systems as the most important and consider different approaches to its solution

Fundamentals of Agricultural and Field Robotics Manoj Karkee, Qin Zhang, 2021-07-27 Over the past century mechanization has been an important means for optimizing resource utilization improving worker health and safety and reducing labor requirements in farming while increasing productivity and quality of 4F Food Fuel Fiber Feed Recognizing this contribution agricultural mechanization was considered as one of the top ten engineering achievements of 20th century by the National Academy of Engineering Accordingly farming communities have adopted increasing level of automation and robotics to further improve the precision management of crops including input resources increase productivity and reduce farm labor beyond what has been possible with conventional mechanization technologies It is more important than ever to continue to develop and adopt novel automation and robotic solutions into farming so that some of the most complex agricultural tasks which require huge amount of seasonal labor such as fruit and vegetable harvesting could be automated while meeting the rapidly increasing need for 4F In addition continual innovation in and adoption of agricultural automation and robotic technologies is essential to minimize the use of depleting resources including water minerals and other chemicals so that sufficient amount of safe and healthy food can be produced for current generation while not compromising the potential for the future generation This book aims at presenting the fundamental principles of various aspects of automation and robotics as they relate to production agriculture the branch of agriculture dealing with farming operations from field preparation to seeding to harvesting and field logistics The building blocks of agricultural automation and robotics that are

discussed in the book include sensing and machine vision control guidance manipulation and end effector technologies The fundamentals and operating principles of these technologies are explained with examples from cutting edge research and development currently going on around the world This book brings together scientists engineers students and professionals working in these and related technologies to present their latest examples of agricultural automation and robotics research innovation and development while explaining the fundamentals of the technology The book therefore benefits those who wish to develop novel agricultural engineering solutions and or to adopt them in the future
