Wolfram,Robin D. Rogers,Lajos G. Gázdó,1997-03-31 Purpose of the Workshop In the spirit of enhancing developments in science and technology by facilitating international scientific cooperation the Science Committee of NATO is sponsoring AR W s in several selected priority areas The objective of this workshop was to discuss what microbial mediated problems have been experienced in the area of nuclear waste management and spent fuel storage Long term storage of high level wastes in repositories is just starting in some countries However low and medium level wastes have been stored for several decades In

the area of spent fuel interim storage has been extended at many locations far beyond the intended time. It was a priority of the workshop to examine and discuss what deleterious effects have been observed under these storage conditions or under conditions used in simulated trial tests for predicting material performance under the storage conditions. For example, one chronic problem that was discussed was the possibility that microbial influenced corrosion (MIC) could be taking place in the wet storage of spent fuel thereby initiating or accelerating the process of corrosion. Another discussion in the area of waste forms focused on the presence of biofilms which may be breaking down the structure of the waste form and thereby jeopardizing its integrity. The meeting focused on discussing the observations and data collected relating to problems encountered in the storage of these types of wastes and sharing this information with others that have not monitored their facilities for similar problems.

Aluminium Alloys and Composites Kavian Cooke, 2020-03-04. Aluminium (Al) is a metal of great importance because of its excellent corrosion resistance, high electrical and thermal conductivity, good reflectivity, and very good recycling characteristics. The properties of heat-treatable Al alloys can be further enhanced by the inclusion of a reinforcing phase that increases the mechanical properties of the overall composite. This book is a comprehensive guide on the different types of aluminum alloys and the new advances that have been made in developing and manufacturing aluminum alloys and composites. This text provides a comprehensive overview of the processing, formability, and chemical composition of aluminum alloys and composites. Part One

is focused on evaluating the types and properties of advanced aluminum alloys and composites while Part Two explores characterization The advantage of this book is that it provides a detailed review of major advances that have occurred in the development and application of aluminum alloys and composites while outlining a development strategy for these materials
