Assertion and Conditionals Anthony Appiah, 1985-09-19 This book develops in detail the simple idea that assertion is the expression of belief In it the author puts forward a version of probabilistic semantics which acknowledges that we are not perfectly rational and which offers a significant advance in generality on theories of meaning couched in terms of truth conditions It promises to challenge a number of entrenched and widespread views about the relations of language and mind Part I presents a functionalist account of belief worked through a modified form of decision theory In Part II the author generates a theory of meaning in terms of assertibility conditions whereby to know the meaning of an assertion is to know the belief it expresses

Knowledge and Conditionals Robert C. Stalnaker, 2019-06-27 Robert C Stalnaker presents a set of essays on the structure of inquiry In the first part he focuses on the concepts of knowledge belief and partial belief and on the rules and procedures we use or ought to use to determine what to believe and what to claim that we know In the second part he examines conditional statements and conditional beliefs their role in epistemology and their relations to causal and explanatory concepts such as dispositions objective chance relations of dependence and independence A central concern of the book is the interaction of different cognitive perspectives the ways in which the attitudes of rational agents are or should be influenced by critical reflection on their present cognitive situation on their own cognitive situations at other times and on the cognitive situations of others with whom they interact The general picture that is developed is naturalistic following Hume in rejecting a substantive role for pure reason in the defense of inductive rules and in giving causal concepts a central role in the description and explanation of our cognitive practices However Stalnaker rejects the side of Hume that aims to reduce concepts involving natural necessity to more basic descriptive concepts Instead he argues that the development of inductive rules and practices takes place in interaction with the development of concepts for giving a theoretical description of the world
