Assessment and Treatment of Childhood Problems, Second Edition Carolyn S. Schroeder, Betty N. Gordon, 2002-07-01
This popular book guides clinicians and students in assessing and treating common childhood problems. Written in a highly accessible style, the volume presents an overview of healthy development, examines risk and protective factors for psychopathology, and spells out a behaviorally oriented model of assessment and treatment planning for children aged 2-12. Each problem-focused chapter reviews the literature on the topic at hand and provides step-by-step guidelines for practice, illustrated with helpful case examples. Featuring appendices that describe widely used assessment instruments, the book also contains more than 20 reproducible measures, clinical forms, and parent handouts ready to photocopy and use.

Mental Health Interventions with Preschool Children Robert D. Lyman, Toni L. Hembree-Kigin, 2013-11-11 Preschool children have been largely neglected in the mental health treatment literature, although research has established that many behavioral and emotional disorders in children result from events occurring during the preschool years or are first manifested during this period. This has occurred for several reasons. Traditional psychoanalytic thinking has considered preschoolers to be too psychologically immature for complete manifestations of psychopathology, and the limited language abilities of young children have complicated assessment procedures and made them less appropriate for treatment approaches that are largely verbal in nature. In addition, the developmental complexity of the preschool period has deterred many researchers from investigating clinical issues with this age group. Partly as a result of the lack of information on preschoolers in the literature, practitioners have historically been uncomfortable in conducting assessments and initiating treatment with young children. They have often adopted a wait-and-see attitude in which formal mental health diagnosis and treatment are not implemented until after the child's entry into school. Unfortunately, such a delay may mean wasting the time during which mental health interventions can be maximally effective. Recently, this attitude has changed, and practitioners now recognize the need for assessment and treatment of behavioral and emotional disorders early in life. What they require to assist them in the timely delivery of such services is information about assessment and treatment procedures specifically designed for preschoolers and with demonstrated efficacy with that age group.

Model Programs in Child and Family Mental Health Michael C. Roberts, 2014-02-04 This volume is the product of a combined effort to find programs of service delivery that demonstrably treat the varieties of mental health problems of children and their families. The Section on Clinical Child Psychology, APA Clinical Psychology Section I, and the Division of Child Youth and Family Services, APA Division 37, established a task force whose mission was to identify, provide recognition for, and disseminate information on such programs. Their findings are presented here. The opening chapter and each section overview chapter provide
